Bangalore

Approved by the Academic Council at its 26th meeting held on 14th July 2022

University's Vision, Mission and Objectives

The M. S. Ramaiah University of Applied Sciences (MSRUAS) will focus on student-centric professional education and motivates its staff and students to contribute significantly to the growth of technology, science, economy and society through their imaginative, creative and innovative pursuits. Hence, the University has articulated the following vision and objectives.

Vision

MSRUAS aspires to be the premier university of choice in Asia for student centric professional education and services with a strong focus on applied research whilst maintaining the highest academic and ethical standards in a creative and innovative environment

Mission

Our purpose is the creation and dissemination of knowledge. We are committed to creativity, innovation and excellence in our teaching and research. We value integrity, quality and teamwork in all our endeavors. We inspire critical thinking, personal development and a passion for lifelong learning. We serve the technical, scientific and economic needs of our Society.

Objectives

1. To disseminate knowledge and skills through instructions, teaching, training, seminars, workshops and symposia in Engineering and Technology, Art and Design, Management and Commerce, Health and Allied Sciences, Physical and Life Sciences, Arts, Humanities and Social Sciences to equip students and scholars to meet the needs of industries, business and society
2. To generate knowledge through research in Engineering and Technology, Art and Design, Management and Commerce, Health and Allied Sciences, Physical and Life Sciences, Arts, Humanities and Social Sciences to meet the challenges that arise in industry, business and society
3. To promote health, human well-being and provide holistic healthcare
4. To provide technical and scientific solutions to real life problems posed by industry, business and society in Engineering and Technology, Art and Design, Management and Commerce, Health and Allied Sciences, Physical and Life Sciences, Arts, Humanities and Social Sciences
5. To instill the spirit of entrepreneurship in our youth to help create more career opportunities in the society by incubating and nurturing technology product ideas and supporting technology backed business
6. To identify and nurture leadership skills in students and help in the development of our future leaders to enrich the society we live in
7. To develop partnership with universities, industries, businesses, research establishments, NGOs, international organizations, governmental organizations in India and abroad to enrich the experiences of faculties and students through research and developmental programmes

Dean – Academic Affairs

Bangalore

Approved by the Academic Council at its 26th meeting held on 14th July 2022

Programme Specifications: M. Sc. (Organic Chemistry)

Faculty	Mathematical & Physical Sciences
Department	Chemistry
Programme Code	096
Programme Name	M.Sc. (Organic Chemistry)
Dean of the Faculty	Prof. Dilip Kumar Mahanty
Head of the Department	Dr. T. Niranjana Prabhu

1. **Title of the Award:** M.Sc. (Organic Chemistry)
2. **Mode of Study:** Full-Time
3. **Awarding Institution /Body:** M. S. Ramaiah University of Applied Sciences, Bengaluru
4. **Joint Award:** Not Applicable
5. **Teaching Institution:** Faculty of Mathematical & Physical Sciences, M. S. Ramaiah University of Applied Sciences, Bengaluru
6. **Date of Programme Specifications: 14 July 2022**
7. **Date of Programme Approval by the Academic Council of MSRUAS: 14 July 2022**
8. **Next Review Date:** July 2024
9. **Programme Approving Regulating Body and Date of Approval: University Grants Commission, New Delhi, 21st July 2016**
10. **Programme Accredited Body and Date of Accreditation: NA**
11. **Grade Awarded by the Accreditation Body: NA**
12. **Programme Accreditation Validity: NA**
13. **Programme Benchmark:** NA
14. **Rationale for the Programme:**

Chemistry is the scientific tool that used to harness natural resources to enhance our lives in different ways. Chemistry started as the chemistry of life, later it became chemistry of compounds and today it is the study of structure, properties, composition, reactions and preparation of carbon containing including other elements such as nitrogen, oxygen, halogens, phosphorus, silicon, and sulphur. As the society is progressing, it requires various materials such as monomers to produce various polymers and drug molecules that cater to the human needs in curing enormous number of diseases. The demand for oils, fats, surfactants and synthesis of these types of molecules in greener routes is ever increasing with the increasing population. Chemistry is also used in making of agrochemicals, dyestuff, clothes, food stuffs, perfumes, metals for various applications, explosives, etc. It has become an interdisciplinary subject for the synthesis of various materials with wide applications among which sustainable energy source is one, where many organic compounds are synthesised for photovoltaic cells, light emitting diodes etc. as alternative high energy sources.

Paper, pulp, adhesives, personal care, paints and coatings are some of the other areas where organic chemists will contribute in providing new materials and improving existing materials. Prominent players operating in the global specialty monomer market include NOF America Corporation, BASF SE, Arkema Group, Evonik Industries AG, Solvay S.A., IsleChem LLC, Deltech Corporation, Bimax Chemicals

Ltd., and so on. India is the 3rd largest producer of chemicals in Asia by volume and 6th largest producer in the world, which is highly diversified covering more than 80,000 commercial products. It is broadly classified into Basic chemicals, Specialty chemicals, and Agrochemicals. India's proximity to the Middle East, the world's source of petrochemicals feedstock, makes for economies of scale. Mistubishi Chemicals, BASF, ADEKA, AkzoNobel, Dupont, Syngeta, Dyestar, Henkel, Rhodia, Wacker, Croda and SABIC are some of the major chemical industries investing in India.

Organic Chemistry is the study of development, identification, and quantification of chemical components of natural and synthetic molecules. Qualitative analysis gives an indication of the identity of the chemical species in the sample and quantitative analysis determines the amount of one or more of these components. Organic Chemistry is dominated by design and development of molecules along with its characterization. It plays an increasingly important role in the pharmaceutical industry where it develops new drug candidates and in clinical applications where understanding the interactions between the drug and the patient are critical. There are a lot of career opportunities for organic chemists in pharmaceutical and other industries mentioned above, in government laboratories and Industries involved in manufacturing/processing of food/beverage products.

The Faculty of Mathematical and Physical Sciences of MSRUAS offers the M.Sc. (Organic Chemistry) programme with an outcome based curriculum emphasizing the Critical, Analytical and Problem Solving skills to equip the students to pursue their scientific and research career with better preparedness and a mature professional outlook. The presence of other allied Faculties of the University provides for a multi-disciplinary approach which is emerging as a key differentiator in the success of modern scientific and engineering endeavors. In the coming years, the government intends to boost up funds for basic sciences. There is an acute shortage of qualified teaching staff. The job prospects for candidates with M.Sc. (Organic Chemistry) look good in academia, R&D sector and industry.

15. Programme Mission

The purpose of the programme is to create innovative problem solvers in multi-disciplinary settings, entrepreneurs and leaders that apply their knowledge, understanding, cognitive abilities, practical skills and transferable skills gained through systematic, flexible and rigorous learning in the chosen academic domain.

16. Gradate Attributes (GAs)

GA-1. Ability to apply fundamental knowledge of Mathematical and Physical Sciences to solve real life problems in their chosen domain

GA-2. Ability to teach in schools, colleges and universities with relevant training and perform administrative duties in government, semi-government, private and public sector organizations

GA-3. Ability to understand and solve scientific problems by conducting experimental investigations

GA-4. Ability to apply appropriate tools, techniques and understand utilization of resources appropriately in various laboratories

GA-5. Ability to conduct scientific research and disseminate the knowledge in the chosen domain

Dean – Academic Affairs
Ramaiah University of Applied Scienc
Bangalore

GA-6. Ability to understand the effect of scientific solutions on legal, cultural, social, public health and safety aspects, and apply ethical principles to scientific practices and professional responsibilities

GA-7. Ability to develop sustainable solutions and understand their effect on society and environment

GA-8. Ability to Ability to work as a member of a team, to plan and to integrate knowledge of various disciplines and to lead teams in multidisciplinary settings

GA-9. Ability to make effective oral presentations and communicate technical ideas to a broad audience using written and oral means

GA-10. Ability to adapt to the changes and advancements in science and engage in independent and life-long learning

17. Programme Outcomes (POs)

M.Sc. graduates will be able to:

PO-1. Scientific Knowledge: Apply fundamental knowledge of chemical Sciences to solve real life problems in their chosen domain

PO-2. Knowledge, Dissemination and Administration: Teach in schools, colleges and universities with relevant training and perform administrative duties in government, semi-government, private and public sector organizations

PO-3. Problem Solving: Understand and solve scientific problems by conducting experimental investigations

PO-4. Modern Tool Usage: Apply appropriate tools, techniques and understand utilization of resources appropriately in various laboratories

PO-5. Research: Conduct scientific research and disseminate the knowledge in the chosen domain

PO-6. The Science, Society and Ethics: Understand the effect of scientific solutions on legal, cultural, social, public health and safety aspects, and apply ethical principles to scientific practices and professional responsibilities

PO-7. Environment and sustainability: Develop sustainable solutions and understand their effect on society and environment

PO-8. Individual and teamwork: Work as a member of a team, to plan and to integrate knowledge of various disciplines and to lead teams in multidisciplinary settings

PO-9. Communication: Make effective oral presentations and communicate technical ideas to a broad audience using written and oral means

PO-10. Life-long learning: Adapt to the changes and advancements in science and engage in independent and life-long learning

18.Programme Goal

The programme goal is to train students with advanced knowledge and understanding of

Industrial Chemistry with higher order critical, analytical, problem solving and research skills; ability to think rigorously and independently to meet higher level expectations of academia and research with sufficient transferrable skills, and to pursue a career in academia with further relevant training, business and industry.

19. Program Educational Objectives (PEOs)

The objectives of the M.Sc. (Organic Chemistry) Programme are to:

PEO-1. To provide students the fundamental knowledge of chemistry to enable them to deliver efficient solutions for complex scientific problems using analytical and cognitive skills in their chosen domain.

PEO-2. To enable students to apply appropriate tools, techniques and understand utilization of resources in laboratories and computational skills in conducting research in their chosen domains and work as an individual as well as lead team in multidisciplinary settings.

PEO-3. To inculcate ethics, environmental sustainability, communication, soft, managerial and entrepreneurial skills for a successful career in industries and to engage in lifelong learning and also work towards developing sustainable society.

20. Programme Specific Outcomes (PSOs)

At the end of the M.Sc. (Organic Chemistry) programme, the graduate will be able to:

PSO-1. Apply the knowledge of Chemistry to identify and explain basic laws and principles governing physical and chemical systems, use mathematical, statistical and computational methods to manufacture industrially important materials, explain their properties, adopt suitable methods to obtain the required products out of these materials.

PSO-2. Model and explore alternative materials and processes in an industry, develop strategies for commercial viability of a processes and products, solve and interpret results obtained through experimentation, design ways to recycle industrial wastes adopting safe handling practices and perform duties as per scientific protocols, demonstrate to work as an individual, and as a leader.

PSO-3. Demonstrate ethics, leadership qualities, communication, managerial, entrepreneurial skills and involvement in lifelong learning for the betterment of organization, environment and society.

21. Programme Structure:

Semester 1

Sl. No.	Course Code	Course Title	Theory (h/W/S)	Tutorials (h/W/S)	Practical (h/W/S)	Max. Marks	Total Credits
1	CYC511A	Physical Chemistry 1	4			100	4
2	CYC512A	Inorganic Chemistry 1	4			100	4
3	CYC513A	Organic Chemistry 1	4			100	4

4	CYC514A	Instrumental Methods of Analysis	4			100	4
5	CYL515A	Physical Chemistry Laboratory			4	50	2
6	CYL516A	Qualitative & Quantitative Analysis of Inorganic Compounds			4	50	2
7	CYS517A	Seminar 1			2	50	1
Total			**16**		**10**	**550**	**21**

Semester 2

Sl. No.	Course Code	Course Title	Theory (h/W/S)	Tutorials (h/W/S)	Practical (h/W/S)	Max. Marks	Total Credits
1	CYC521A	Physical Chemistry 2	4			100	4
2	CYC522A	Inorganic Chemistry 2	4			100	4
3	CYC523A	Organic Chemistry 2	4			100	4
4	CYC524A	Computational Chemistry	4			100	4
5	CYL525A	Computational Techniques in Chemistry			4	50	2
6	CYL526A	Qualitative & Quantitative Analysis of Organic Compounds			4	50	2
7	CYS527A	Seminar 2			2	50	1
Total			**16**		**10**	**550**	**21**

Semester 3

Sl. No.	Course Code	Course Title	Theory (h/W/S)	Tutorials (h/W/S)	Practical (h/W/S)	Max. Marks	Total Credits
1	CYC651A	Retrosynthetic, Stereochemical and Spectroscopic Analysis	3			100	3
2	CYC652A	Photochemical, Pericyclic and Organocatalytic Reactions	3			100	3
3	CYC653A	Natural Products and Green Synthetic Methods	3			100	3
4	CYC654A	Advanced Heterocyclic Chemistry and Pharmaceutical Products Synthesis	3			100	3

5	MPF615A	Research Methodology	2			50	2
6	CYL656A	Advanced Organic Chemistry Laboratory 1			4	50	2
7	CYL657A	Advanced Organic Chemistry Laboratory2			4	50	2
8	CYS658A	Seminar 3			2	50	1
Total			**14**		**10**	**600**	**19**

Semester 4

Sl. No.	Course Code	Course Title	Theory (h/W/S)	Tutorials (h/W/S)	Practical (h/W/S)	Max. Marks	Total Credits
1	CYI661A	Internship*			8	100	4
	CYS661A	Seminar**					
2	CYP662A	Dissertation Work ***			30	300	15
Total					**38**	**400**	**19**

* Internship can be done during the vacation period for a maximum period of 8 weeks, where the student needs to submit a report along with the presentation.
**A student can opt for seminar instead of internship, where a student in consultation with his/her project supervisor is expected to conduct review of literature related to their project work, write a review article and submit along with a presentation on the same topic.
*** A student in consultation with allotted supervisor is required to conduct research on a topic, submit a dissertation report along with an article in a prescribed journal format. Dissertation can be conducted within the department or in the other department within the university in consultation with Head of the Department. A student can also conduct dissertation work in any of the reputed R & D institute / organization or in an Industry in consultation with Head of the Department. In such cases, an internal supervisor from the department will facilitate and monitor the work along with the external supervisor.

22. Course Delivery: As per the Timetable

23. Teaching and Learning Methods

1. Face to Face Lectures using Audio-Visuals
2. Workshops, Group Discussions, Debates, Presentations
3. Demonstrations
4. Guest Lectures
5. Laboratory work/Field work/Workshop
6. Industry Visit
7. Seminars
8. Group Exercises
9. Project Work
10. Project
11. Exhibitions
12. Technical Festivals

24. Assessment and Grading

Dean – Academic Affairs
Ramaiah University of Applied Sciences
Bangalore

24.1. Components of Grading

There shall be **two components** of grading in the assessment of each course:

Component 1, Continuous Evaluation (CE): This component involves multiple subcomponents (LSC1, LSC2, etc.) of learning assessment. The assessment of the subcomponents of CE is conducted during the semester at regular intervals. This subcomponent represents the formative assessment of students' learning.
Component 2, Semester-end Examination (SEE): This component represents the summative assessment carried out in the form an examination conducted at the end of the semester.
Marks obtained CE and SEE components have equal weightage (CE: 50% and SEE: 50%) in determining the final marks obtained by a student in a Course.
The complete details of Grading are given in the Academic Regulations.

24.2. Continuous Evaluation and Semester-End Examination Policies

Continuous evaluation and Semester-End Examination depends on the type of the course as discussed below:

24.2.1 Theory Courses

Theory Course			
CE (Weightage: 50 %)			**SEE (Weightage: 50 %)**
TSC1 Midterm exam / Term Test	TSC2 Assignment	TSC3 Innovative	SEE Written exam
50 Marks	25 Marks	25 Marks	100 Marks

There shall be three subcomponents, first one is midterm exam carrying 50 marks and others carrying 25 marks each.
The innovative TSC3 can be of any of the following types:

a) Online Test
b) Problem Solving
c) Field Assignment
d) Open Book Test
e) Portfolio
f) Reports
g) Case Study
h) Group Task
i) Quiz
j) Any other

After the three subcomponents are evaluated, the CE component marks are determined as:
CE Component Marks = (Total of the marks obtained in all the three subcomponents) ÷ 2

24.2.2 Laboratory Course

For a laboratory course, the scheme for determining the CE marks is as under:

Laboratory Course

CE (Weightage: 50 %)		SEE (Weightage: 50 %)
LSC1	LSC2	Lab SEE
25 Marks	25 Marks	50 Marks

The subcomponents can be of any of the following types:

a) Laboratory / Clinical Work Record
b) Experiments
c) Computer Simulations
d) Creative Submission
e) Virtual Labs
f) Viva / Oral Exam
g) Lab Manual Report
h) Any other (e.g. combinations)

After the subcomponents of CE are evaluated, the CE component Marks are determined as:
CE Component Marks = (Total of the best two subcomponent marks out of the three) ÷ 2

25. Student Support for Learning

1. Course Notes
2. Reference Books in the Library
3. Magazines and Journals
4. Internet Facility
5. Computing Facility
6. Laboratory Facility
7. Workshop Facility
8. Staff Support
9. Lounges for Discussions
10. Any other support that enhances their learning

26. Quality Control Measures

1. Review of Course Notes
2. Review of Question Papers and Assignment Questions
3. Student Feedback
4. Moderation of Assessed Work
5. Opportunities for students to see their assessed work
6. Review by external examiners and external examiners reports
7. Staff Student Consultative Committee meetings
8. Student exit feedback
9. Subject Assessment Board (SAB)
10. Programme Assessment Board (PAB)

Dean – Academic Affairs
Bangalore University of Applied Sciences
Bangalore

27. Programme Map (Course-PO-PSO Map)

Sem.	Course Title	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
1	Physical Chemistry 1	3		2								3	2	
1	Inorganic Chemistry 1	3		2								3	2	
1	Organic Chemistry 1	3		3								3	3	
1	Instrumental Methods of Analysis	3		2								3	3	
1	Chemistry Laboratory 1				3					3		3	3	3
1	Chemistry Laboratory 2				3					3		3	3	3
1	Seminar 1		2							3				3
2	Physical Chemistry 2	3		3								3	2	
2	Inorganic Chemistry 2	3		2								3	2	
2	Organic Chemistry 2	3		3							2	3	3	
2	Computational Chemistry	3		3	3							3	3	
2	Chemistry Laboratory 3				3					3		3	3	
2	Chemistry Laboratory 4				3					3		3	3	3
2	Seminar 2		2							3				3
3	Retrosynthetic, Stereochemical and Spectroscopic Analysis	3		3								3	2	
3	Photochemical, Pericyclic and Organocatalytic Reactions	3						1			2	3	2	
3	Natural Products and Green Synthetic Methods	3		3				2				3	2	2
3	Advanced Heterocyclic Chemistry and Pharmaceutical Products Synthesis	3		3								3	2	
3	Research Methodology	3		3	3	3				3	3	3	3	3
3	Advanced Organic Chemistry Laboratory 1				3					3			3	3
3	Advanced Organic Chemistry Laboratory2				3					3			3	3
3	Seminar 3		2							3				3
4	Internship									3				3
4	Seminar		2							3			3	3
4	Dissertation Work	3		3	3	3	3		3	3	2	3	3	3
3: Very Strong Contribution, 2: Strong Contribution, 1: Moderate Contribution														

28. Co-curricular Activities

Students are encouraged to take part in co-curricular activities like seminars, conferences, symposia, paper writing, attending industry exhibitions, project competitions and related activities for enhancing their knowledge and networking.

29. Cultural and Literary Activities

Annual cultural festivals are held to showcase the creative talents in students. They are involved in planning and organizing the activities.

30. Sports and Athletics

Students are encouraged to take part in sports and athletic events regularly. Annual sports meet will be held to demonstrate sportsmanship and competitive spirit.

Detailed Course Curriculum

Semester 1

Course Specifications: Physical Chemistry 1

Course Title	Physical Chemistry 1
Course Code	CYC511A
Course Type	Core Theory
Department	Chemistry
Faculty	Faculty of Mathematical and Physical Sciences

1. Course Summary

The aim of this Course is to introduce students to fundamentals and applications of certain aspects of Physical Chemistry.

In this Course the students are taught the laws of thermodynamics and their application to phase transformations, principles of photochemistry, electrochemistry and kinetics. They are also taught about phase equilibria, colloids, micelles and colligative properties. Emphasis is given on quantum mechanics and the occurrence of various types of molecular energy levels.

2. Course Size and Credits:

Number of Credits	04
Credit Structure (Lecture: Tutorial: Practical)	4:0:0
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- **CO-1.** Explain the laws of thermodynamics, concepts in photochemistry, JT effect, Raoult's law, and Henry's law to the physical transformation of substances
- **CO-2.** Discuss the theories of kinetics, concepts in quantum mechanics, phase diagram construction and electrochemistry
- **CO-3.** Illustrate quantum mechanical systems such as particle in a box, hydrogen atom, orbitals, electron systems, kinetics of complex & fast reactions
- **CO-4.** Apply the principles of chemical & enzyme kinetics to determine the energetics of chemical reactions and assess the effect of catalyst on the outcome of reaction kinetics, laws of electrochemistry to estimate chemical compounds, applications of Schrodinger wave equation and thermodynamic processes
- **CO-5.** Solve problems based on quantum mechanics and chemical/enzyme kinetics, electrochemistry, colloids, colligative properties, Phase equilibria and thermodynamics

4. Course Contents

Quantum Chemistry I:
Postulates of quantum mechanics, Schrödinger equation (time dependent & independent); Eigen values and Eigen functions, Numerical. Physical interpretation of wave function. Concepts of operators (Laplacian, Hamiltonian, Linear and Hermition). Commutation of operators, normalization, orthogonality and orthonormality of wave functions, Numerical. Solution of Schrödinger equation for a free particle, particle in a ring, particle in a 1D and 3D boxes, Numerical. Hamiltonian equation for hydrogen and hydrogen like atoms. Application of Schrödinger equation to harmonic oscillator, rigid rotator. Eigen functions and eigenvalues of angular momentum.

Thermodynamics I:
First law of thermodynamics: State function, Internal energy, enthalpy and heat capacity. Joule – Thomson effect, Numerical. Second law of thermodynamics: Spontaneous and reversible processes, Carnot theorem, concept of entropy, Maxwell relations, Gibb's -Helmholtz equation, Chemical potential, Clapeyron-Clausius equation, concept of activity and activity coefficient, Numerical. Third law of thermodynamics: Determination of absolute entropies, Boltzmann entropy equation, entropies of real gases.
Concepts of partial molar properties – partial molar free energy, chemical potential, partial molar volume and its significance. Gibbs-Duhem equation, Gibbs-Duhem-Margulus equation. Determination of partial molar volume: Graphical method, intercept method and apparent molar volume method. Activity and activity coefficient: Determination of activity coefficient by EMF and solubility method, Numerical.

Chemical Kinetics:
Rate of reaction, rate law, rate constant, molecularity, order & numerical problems based on kinetic data. Rate expression of first, second and third order reactions. Methods of determining order of a reaction, half-life time of a reaction, effect of temperature and catalyst on reaction rates, mechanisms of complex reactions, collision theory of bimolecular reaction, Arrhenius equation, ACT theory, Lindeman theory, kinetics of complex reactions, chain reactions and branched chain reactions.
Kinetics of fast reactions- flow method (Plug flow method and Stopped flow method), Flash photolysis and Shock tube method.

Photochemistry:
Jablonski diagram, Fluorescence, phosphorescence, Photosensitization, and quenching and luminescence. Laws of photochemistry (Beer-Lambert's law, Grotthus-Draper law, Stark-Einstein law) and numerical. Quantum yield and numerical, photochemical processes with examples. Quantum yield of photochemical combination of (i) H2 and Cl2 (ii) H2 and Br2 (iii) dissociation of HI (iv) dimerization of anthracene.

Electrochemistry 1:
Nernst equation, redox systems, electrochemical cells; electrolytic conductance – Kohlrausch's law and its applications; transport number, ionic mobility, ionic equilibria; conductometric and potentiometric titrations, Oswald's dilution law.
Electrochemistry of solutions: Ionic atmosphere, Debye-Huckel theory for the problem of activity coefficient, Debye-Huckel limiting Law, Debye-Huckel equation for appreciable concentration, Debye-Huckel Onsagar conductance equation and its extension to ion solvent interations, Debye-Huckel Bjerrum mode, Ion association, triple ions, triple ions and conductance minima. Thermodynamics of electrified interface, derivation of electro capillary Lipmann's equation, surface excess, thermodynamic aspects of surface excess.

Phase Equilibrium:
Derivation of phase rule from the concept of chemical potential. Calculation of Phases,

components and degree of freedom. Reduced phase rule. Application of Phase Rule to one (water and Sulphur), two (Pb-Ag and KI-water) and three component (CH3COOH-CHCl3-Water and (Salt A- Salt B-Water) system. High pressure systems (water and carbon). Reduced phase rule. Principle of triangular diagram, plots for a mixture of three liquids consisting of one, two and three pairs of partially miscible liquids.

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO-1	3		2								3		
CO-2	3										3		
CO-3	3										3		
CO-4	3		2								3	2	
CO-5	3		2								3		
3: Very Strong Contribution, 2: Strong Contribution, 1: Moderate Contribution													

6. Course Teaching and Learning Methods

Teaching and Learning Methods	Duration in hours	Total Duration in Hours
Face to Face Lectures		50
Demonstrations		02
1.Demonstration using Videos	02	
2. Demonstration using Physical Models / Systems	00	
3. Demonstration on a Computer	00	
Numeracy		08
1. Solving Numerical Problems	08	
Practical Work		00
1. Course Laboratory	00	
2. Computer Laboratory	00	
3. Engineering Workshop / Course/Workshop / Kitchen	00	
4. Clinical Laboratory	00	
5. Hospital	00	
6. Model Studio	00	
Others		00
1. Case Study Presentation	00	
2. Guest Lecture	00	
3. Industry / Field Visit	00	
4. Brain Storming Sessions	00	
5. Group Discussions	00	
6. Discussing Possible Innovations	00	
Term Tests, Laboratory Examination/Written Examination, Presentations		10
Total Duration in Hours		**70**

7. Course Assessment and Reassessment

The details of the components and subcomponents of course assessment are presented in the Programme Specifications document pertaining to the M. Sc. (Industrial Chemistry) Programme. The procedure to determine the final course marks is also presented in the Programme Specifications document.

Dean – Academic Affairs
Ramaiah University of Applied Sciences
Bangalore

The evaluation questions are set to measure the attainment of the COs. In either component (CE or SEE) or subcomponent of CE (TSC1, TSC2, TSC3), COs are assessed as illustrated in the following Table.

Focus of COs on each Component or Subcomponent of Evaluation				
	Component 1: CE (50% Weightage)			Component 2: SEE (50% Weightage)
Subcomponent ▶	TSC1	TSC2	TSC3	
Subcomponent Type ▶	Term Test	Assignment	Innovative	100 Marks
Maximum Marks ▶	50	25	25	
CO-1	X		X	X
CO-2	X		X	X
CO-3	X		X	X
CO-4		X	X	X
CO-5		X	X	X
The details of TSC1, TSC2, TSC3 are presented in the Programme Specifications Document.				

The Course Leader assigned to the course, in consultation with the Head of the Department, shall provide the focus of COs in each component of assessment in the above template at the beginning of the semester.

Course reassessment policies are presented in the Academic Regulations document.

7. Achieving COs

The following skills are directly or indirectly imparted to the students in the following teaching and learning methods:

S. No	Curriculum and Capabilities Skills	How imparted during the course
1.	Knowledge	Classroom lectures
2.	Understanding	Classroom lectures, Self-study
3.	Critical Skills	Assignment
4.	Analytical Skills	Assignment
5.	Problem Solving Skills	Assignment, Examination
6.	Practical Skills	Assignment
7.	Group Work	--
8.	Self-Learning	Self-study
9.	Written Communication Skills	Assignment, Examination
10.	Verbal Communication Skills	--
11.	Presentation Skills	--
12.	Behavioral Skills	--
13.	Information Management	Assignment
14.	Personal Management	--
15.	Leadership Skills	--

8. Course Resources

a. Essential Reading

1. Class Notes

Course Specifications: Inorganic Chemistry 1

Course Title	Inorganic Chemistry 1
Course Code	CYC512A
Course Type	Core Theory
Department	Chemistry
Faculty	Faculty of Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to introduce students to the basic and advanced concepts of Inorganic

Chemistry.

The student will be introduced to the concept of atomic structure and chemical bonding. The basic chemistry of main group elements and d and f block elements would be focused on magnetic, electronic and spectral properties. Acid-Base chemistry and non-aqueous system will be elaborated. The solid state chemistry and structure of inorganic ionic compounds such as NaCl, ZnS, CsCl, CaF_2 and $CaCl_2$ will be emphasized.

2. Course Size and Credits:

Number of Credits	04
Credit Structure (Lecture: Tutorial: Practical)	4:0:0
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO 1. Outline the principles of electron filling in the atomic orbitals, VSEPR theory, molecular orbital theory, wades rule, polymorphism, magnetic property d and f-block elements and acid-base concepts and non-aqueous solutions.

CO 2. Differentiate between VSEPR and MO theory/CFT, closo/nido/arachno boranes, structure of silicates and phosphates, electronic configuration in d and f-block elements and its consequences

CO 3. Explain with examples the industrially important compounds, inorganic molecules by VSEPR theory, structure of ionic crystals, defects in crystals, acid- base concepts, closo/nido/ arachno boranes, structure of silicates and phosphates, super heavy elements

CO 4. Discuss the structure and bonding in solids, borazines, metallocarboranes, oxyacids of nitrogen, phosphorous sulfur halogens, intercalated compounds, silicates, concepts of non-aqueous solvents, polarizability and partial covalent character

CO 5. Illustrate the potential applications of main group compounds, d and f block elements, boranes carboranes silicates phosphates, metallo carboranes and non-aqueous solvents

4. Course Contents

Atomic Structure and Chemical Bonding:

Aufbau energy diagram, Pauli's exclusion principle and Hund's rule of maximum multiplicity, Valence bond theory, Hybridization and Valence shell electron pair repulsion theory (VSEPR): crystal field theory, shapes of molecules; Molecular orbital theory: bond order, stability and magnetic properties of diatomic molecules.

Ionic Bond: Lattice energy: Born Lande equation, Born-Haber cycle, uses of Born-Haber type of calculations.

Kapustinskii equation; polarizability and partial covalent character.

Industrial important compounds of alkali and alkaline earth metals:

Hydroxides, plastaer of paris, bicarbonates, bicarbonates and metals oxides, halides, boranes, carboranes- application of Wades rule, metallocarboranes borazines; Compounds of phosphorus, sulphur and nitrogen - oxyacids of nitrogen, phosphorus, sulfur and halogens (including the ligation

properties of their anions); noble gas compounds; carbon and sulphur. Silicates: classification and structures of ortho, pyro, chain, cyclic, sheet and three dimensional silicates, silica gel, alumino-silicates. Graphitic compounds – intercalation compounds with heavier alkali metals, halides, oxides, oxygen and fluorine.

d and f – Block elements - Transition elements:
Basic concepts of d-block elements electronic configuration, oxidation state, color, magnetic, catalytic properties. 3d, 4d and 5d series.
Lanthanides: Elements and their electronic configurations; oxidation states; lanthanide contraction and its consequences; magnetic properties; electronic spectral properties and colour; complex formation; isolation of lanthanides from monazite sand; separation of lanthanides using ion-exchange method.

Actinides: Elements and their electronic configuration, comparison of actinides with lanthanides – with respect to the oxidation states, electronic spectral properties and complex formation. Comparative study of f-block elements with d-block elements – with respect to oxidation states; magnetic properties and electronic spectral properties. Trans-uranium elements, further extension of periodic table, super heavy elements (SHE).

Acids, Bases and Solvents:
Review of acid- base concepts– Bronsted, Lewis and solvent system definitions of acids and bases, Strengths of hydracids, oxoacids and Lewis acids, Drago -Wayland equation for Lewis acid- Lewis base interactions, HSAB concept, Bronsted acid-base strength verses hardness and softness, symbiosis, applications of HSAB concept. Non-aqueous media – Classification of solvents, leveling effect, reactions in HF, BrF_3, N_2O_4 and molten salts, super acids. Liquid ammonia, chemical reactions of ammonia, anhydrous H2SO4, liquid dinitrogen tetroxide and Sulphur dioxide.

Solid-State Chemistry:
Basic concepts of symmetry in crystals, Bravais Lattices, miller indices, radius ratio rule Structure of ionic crystals, NaCl, ZnS, CsCl, CaF_2, $CdCl_2$.Defects and ion transport, schottky defect, Frenkel Defects, metal excess defects, metal deficiency defects, thermal defects, semiconductor chemistry.

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)

Term Tests, Laboratory Examination/Written Examination, Presentations		10
Total Duration in Hours		**70**

7. Course Assessment and Reassessment

The details of the components and subcomponents of course assessment are presented in the Programme Specifications document pertaining to the M.Sc. (Organic Chemistry) Programme. The procedure to determine the final course marks is also presented in the Programme Specifications document.

The evaluation questions are set to measure the attainment of the COs. In either component (CE or SEE) or subcomponent of CE (TSC1, TSC2, TSC3), COs are assessed as illustrated in the following Table.

Focus of COs on each Component or Subcomponent of Evaluation				
	Component 1: CE (50% Weightage)			**Component 2: SEE (50% Weightage)**
Subcomponent ▶	**TSC1**	**TSC2**	**TSC3**	
Subcomponent Type ▶	**Mid Term Test**	**Assignment**	**Innovative**	**100 Marks**
Maximum Marks ▶	**50**	**25**	**25**	
CO-1	×	×	×	×
CO-2	×		×	×
CO-3	×	×	×	×
CO-4			×	×
CO-5		×	×	×
The details of TSC1, TSC2, TSC3 are presented in the Programme Specifications Document.				

The Course Leader assigned to the course, in consultation with the Head of the Department, shall provide the focus of COs in each component of assessment in the above template at the beginning of the semester.

Course reassessment policies are presented in the Academic Regulations document.

8. Achieving COs

The following skills are directly or indirectly imparted to the students in the following teaching and learning methods:

S. No	Curriculum and Capabilities Skills	How imparted during the course
1.	Knowledge	Classroom lectures
2.	Understanding	Classroom lectures, Self-study
3.	Critical Skills	Assignment
4.	Analytical Skills	Assignment
5.	Problem Solving Skills	Assignment, Examination
6.	Practical Skills	Assignment
7.	Group Work	--
8.	Self-Learning	Self-study
9.	Written Communication Skills	Assignment, Examination
10.	Verbal Communication Skills	--
11.	Presentation Skills	--

Course Specifications: Organic Chemistry 1

Course Title	Organic Chemistry 1
Course Code	CYC513A
Course Type	Core Theory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to introduce students to various concepts of organic chemistry. Students will be able to discuss and select starting material, reactive intermediates, stereochemistry required in synthesis of organic molecules. Course focuses on carbohydrates, vitamins and heterocyclic chemistry. Emphasis is given on organic reaction mechanisms and reactive intermediates.

2. Course Size and Credits:

Number of Credits	04
Credit Structure (Lecture: Tutorial: Practical)	4:0:0
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO 1. Discuss the principles of structure and bonding, acid base concepts, reactive intermediates, stereochemistry, vitamins and carbohydrates

CO 2. Illustrate the reaction mechanism and stereochemistry of the molecules and structural elucidation of natural products

CO 3. Identify the reagents, reactive intermediates, reaction mechanism, stereochemistry of heterocyclic compounds, carbohydrates and other molecules

CO 4. Apply the basic concepts of synthesis of heterocyclic molecules, carbohydrates, reactive intermediates for the synthesis of new molecules

CO 5. Recommend reagents, reactive intermediates, reaction mechanism, stereochemistry for synthesis of small organic molecules

4. Course Contents

Structure and Bonding in Organic Molecules:

Review of basic principles of structure and bonding, application of acid base concepts, Aromaticity and antiaromaticity, Hückel's rule, n-annulenes, heteroannulene, fullerenes, C-60, cryptates, Bonds weaker than covalent; addition compounds, inclusion compounds, crown ethers, cyclodextrins, catenanes and rotaxanes

Reactive intermediates:

Reactive intermediates: Generation, stability , structure, and reactivity of (1) Carbocations (2) Carbanions- (3) Carbenes (4) Free radicals and (5) Nitrene, Types of mechanism reactions, Classification of reactions.

Reactions:

Addition, Elimination and Condensation reactions: Electrophilic, Nucleophilic and Free-radical reactions of aliphatic, alkenes, alkynes, aromatics, carbonyl compounds; Various mechanisms involved; Reactivity control

Classification of reactions and mechanisms. Thermodynamic and kinetic requirements, kinetic and thermodynamic control, Hammond postulate, Curtin-Hammett principle. Potential energy diagrams, transition states and intermediates.

Methods of determining mechanisms: Based on the structure of products, determination of the presence of intermediates, isotopic labeling, isotope effects, from stereochemical evidence.

Acids and bases: Hard and soft acids and bases. Effect of structure on the strengths of acids and bases

Stereochemistry:

Fischer, Newman, Sawhorse and flying wedge projections and their interconversions. Optical isomerism: Elements of symmetry and chirality. D-L conventions. CIP rules, R-S and M-P conventions. Cram's and Prelog's rules.

Conformational analysis: Conformational analysis of cycloalkanes: cyclobutane, cyclopentane, cychexanes (monosubstituted e.g., methyl, iso-propyl, tert-butyl and di-substituted cyclohexanes e.g., dialkyl, dihalo, diols), and cycloheptane. Nomenclature and conformations of fused rings and bridged ring systems.

Carbohydrates – I:

Introduction to carbohydrates. Classification of monosaccharides: aldoses and ketoses. Structural formulae of sugars- aldotetroses, aldopentoses and aldohexoses. Mutarotation, Configuration of aldoses and ketoses: d- and l-sugars. Cyclic structures of monosaccharides. Cyclization of hydroxyaldehydes, pyranose and furanose forms of monosaccharides. 12 Reactions of monosaccharides: esters and ether formations, formation of cyclic ketals, and acetals. Glycoside formation, enolisation, tautomerisation, epimerization and reduction. Reaction of monosaccharides with phenyl hydrazine: formation of osazones. Oxidation of monosaacharides. Reducing and non-reducing sugars. Reaction with bromine water, nitric acid and periodate. Synthesis of aldonic, uronic, aldaric acids and alditols.

Heterocyclic compounds:

Nomenclature of heterocyclic compounds. Synthesis and reactivity of five-, six- and seven-membered heterocycles containing one or more hetero atoms of nitrogen, oxygen and sulfur; Fused-ring heterocycles

Vitamins:

Biological importance and synthesis of Vitamins A, Vitamin B1 (thiamine), Vitamin B6 (pyridoxine), folic acid, pantothenic acid, riboflavin, Vitamin C, Vitamin E (α-tocopherol), Vitamin H (biotin), Vitamins K1 and K2

General biogenetic studies: classification, structural elucidation, chemistry and applications of Alkaloids, and Terpenes

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3

Course Specifications: Instrumental Methods of Analysis

Course Title	Instrumental Methods of Analysis
Course Code	CYC514A
Course Type	Core Theory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to introduce students to modern instrumental methods of analysis in the field of chemistry. Students are taught the overview of modern instrumental methods for determining the structure, composition and properties of materials. Techniques which are included in the module are spectroscopic techniques such as optical, mass, electron and x-ray photoelectron spectroscopic methods, separation techniques such as chromatography including the detection techniques, microscopic techniques such as optical spectroscopy, electron spectroscopy and probe based microscopy. This module also deals with thermal characterization techniques, voltammetry techniques, radio analytical techniques and x-ray diffraction technique.

2. Course Size and Credits:

Number of Credits	04
Credit Structure (Lecture: Tutorial: Practical)	4:0:0
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO 1. Outline the working principle and instrumentation of mass, optical, electron and X-ray and NMR spectroscopic techniques, chromatography, microscopy, thermal, X-ray diffraction, electrochemical and radio analytical techniques
CO 2. Analyze the morphology of materials using optical, electron and probe type microscopy techniques
CO 3. Interpret thermal properties of materials using TGA, DTA and DSC techniques
CO 4. Identify and analyze the appropriate chromatographic techniques for separation and analysis of chemical compounds
CO 5. Interpret the structure and/or determine concentration of chemical compounds using UV-Visible, Infrared, Raman, NMR, mass spectroscopy and voltammetry techniques.

4. Course Contents

Spectrometric methods:

Theory, working principles and applications of Optical atomic spectroscopy (AAS and AES), UV/visible spectrometry, Molecular fluorescence/Luminescence spectrometry, Infrared Spectroscopy, Raman Spectroscopy, X-Ray Photoelectron Spectroscopy, NMR Mass spectrometry: Basic theory, instrument types including quadrupoles, ion traps, and chromatography coupling with examples of recent applications, Interpretation of mass spectrometric data

Separation techniques:
Theory, working principles, instrumentation and applications of Gas & liquid chromatography, HPLC, separation based on volatility, solubility, interactions with stationary phase, size and electrical field Detection: simple vs. specific (gas and liquid), detection as a means of further analysis (use of tags and coupling to IR and MS), electrophoresis (plates and capillary)

Microscopy:
Theory, working principles and applications of Light Microscopy: Polarizing Microscope, Reflected Light Microscopy, Electron Microscopy: Transmission Electron Microscope (TEM), Scanning Electron Microscope (SEM), Probe Microscopy: Scanning Probe Microscopy (SPM), Scanning Tunneling Microscopy (STM) & Atomic Force Microscope (AFM)

Thermometric methods:
Thermogravimetric analysis, differential scanning calorimetry, differential thermal analysis

Electroanalytical Techniques:
Principles, instrumentations and applications of conductometry, potentiometry. Principles, Instrumentation and applications of voltammetric techniques such as hydrodynamic voltammetry, polarography, cyclic voltammetry, pulse voltammetry and stripping voltammetry

Radio analytical techniques- Radiometric Analysis, Isotopic dilution techniques, neutron activation analysis X-ray-diffraction analysis: Principle, instrumentation and applications

Course Specifications: Physical Chemistry Laboratory

Course Title	Physical Chemistry Laboratory
Course Code	CYL515A
Course Type	Laboratory Course
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

This course intends to train the students to perform quantitative analysis related to physical chemistry and instrumentation.
Students are trained to determine physical and chemical properties of given samples. They are trained to analyze the results and infer appropriate conclusions based on concepts of physical and inorganic chemistry.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	0:0:2
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO 1. Setup the experimental apparatus required to achieve the stated aim
CO 2. Conduct experiments as per the standard procedures and tabulate the measured values
CO 3. Calculate the required parameters and plot the results
CO 4. Interpret and draw conclusions
CO 5. Write laboratory report as per the prescribed format.

4. Course Contents

1. Determination of pKa values of orthophosphoric acid using pH Meter.
2. Conductometric estimation of Lithium sulphate against Barium Chloride.
3. Potentiometric estimation of KI solution using standard KMnO4 solution.
4. Determine the creatinine content in the given sample using spectrophotometry.
5. Construction of phase diagram for three-component system (ethanol/ toluene/water).
6. Estimation of first order rate constant of hydrolysis of ethyl acetate by volumetry.
7. Determination of Critical Solution Temperature (CST) of phenol-water system
8. Determination of molecular weight of a polymer by viscosity method.
9. Conductometric estimation of a mixture of strong and weak acids by using a standard alkaline solution.

10. Potentiometric estimation of acid mixture versus NaOH.
11. Kinetics of autocatalytic reaction between potassium permanganate and oxalic acid.
12. Determination of intrinsic viscosity of a given polymer using Ubbelohde viscometer.

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO-1				3							3		
CO-2				3							3		
CO-3				3							3		
CO-4				3							3		
CO-5									3			3	3

6. Course Teaching and Learning Methods

Teaching and Learning Methods	Duration in hours	Total Duration in Hours
Face to Face Lectures		00
Demonstrations		00
1.Demonstration using Videos	00	
2. Demonstration using Physical Models / Systems	00	
3. Demonstration on a Computer	00	
Numeracy		00
1. Solving Numerical Problems	00	
Practical Work		60
1. Course Laboratory	60	
2. Computer Laboratory	00	
3. Engineering Workshop / Course/Workshop / Kitchen	00	
4. Clinical Laboratory	00	
5. Hospital	00	
6. Model Studio	00	
Others		00
1. Case Study Presentation	00	
2. Guest Lecture	00	
3. Industry / Field Visit	00	
4. Brain Storming Sessions	00	
5. Group Discussions	00	
6. Discussing Possible Innovations	00	
Term Tests, Laboratory Examination/Written Examination, Presentations		08
Total Duration in Hours		**68**

7. Course Assessment and Reassessment

The details of the components and subcomponents of course assessment are presented in the Programme Specifications document pertaining to the M.Sc. (Organic Chemistry) Programme. The procedure to determine the final course marks is also presented in the Programme Specifications document.

The evaluation questions are set to measure the attainment of the COs. In either component (CE or SEE) or subcomponent of CE (LSC1, LSC2), COs are assessed as illustrated in the following Table.

Focus of COs on each Component or Subcomponent of Evaluation			
	Component 1: CE (50% Weightage)		Component 2: SEE (50% Weightage)
Subcomponent ▶	LSC1	LSC2	
Subcomponent Type ▶	Lab Report	Term Test	50 Marks
Maximum Marks ▶	25	25	
CO-1	×	×	×
CO-2	×	×	×
CO-3	×	×	×
CO-4	×	×	×
CO-5	×	×	
The details of LSC1, LSC2 are presented in the Programme Specifications Document.			

The Course Leader assigned to the course, in consultation with the Head of the Department, shall provide the focus of COs in each component of assessment in the above template at the beginning of the semester.

Course reassessment policies are presented in the Academic Regulations document.

8. Achieving COs

The following skills are directly or indirectly imparted to the students in the following teaching and learning methods:

S. No	Curriculum and Capabilities Skills	How imparted during the course
1.	Knowledge	Classroom lectures
2.	Understanding	Classroom lectures, Self-study
3.	Critical Skills	Assignment
4.	Analytical Skills	Assignment
5.	Problem Solving Skills	Assignment, Examination
6.	Practical Skills	Assignment
7.	Group Work	--
8.	Self-Learning	Self-study
9.	Written Communication Skills	Assignment, Examination
10.	Verbal Communication Skills	--
11.	Presentation Skills	--
12.	Behavioral Skills	--
13.	Information Management	Assignment
14.	Personal Management	--
15.	Leadership Skills	--

9. Course Resources

a. Essential Reading

1. Laboratory Manual
2. B. Vishwanathan and P.S. Raghavan (2005) Practical Physical Chemistry, VIVA Books, New Delhi

b. Recommended Reading

1. Arthur Israel Vogel, G. H. Jeffery (1989) Vogel's text book of quantitative chemical analysis, Longman Scientific & Technical, London, UK

10. Course Organization

Course Specifications: Qualitative and Quantitative Analysis of Inorganic Compounds

Course Title	Qualitative & Quantitative Analysis of Inorganic Compounds
Course Code	CYL516A
Course Type	Laboratory Course
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

This course intends to train the students to perform qualitative and quantitative analysis of Inorganic compounds.

Students are trained to do the semi micro qualitative analysis of inorganic mixture containing four cations; out of which two will be rare metal ions such as W, Mo, Se, Ti, Zr, Ce, Th and V. Students will also be trained to perform quantitative analysis of inorganic compounds using volumetric and gravimetric analysis. They are trained to analyze the results and infer appropriate conclusions based on concepts of inorganic chemistry.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	0:0:2
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO 1. Setup the experimental apparatus required to achieve the stated aim
CO 2. Conduct experiments as per the standard procedures and tabulate the measured values
CO 3. Calculate the required parameters and plot the results
CO 4. Interpret and draw conclusions
CO 5. Write laboratory report as per the prescribed format.

4. Course Contents

1. Semi micro qualitative analysis of inorganic mixture containing four cations; out of which two will be rare metal ions such as W, Mo, Se, Ti, Zr, Ce, Th and V.
   (A minimum of 4-5 salt mixture needs to be performed)
2. Preparation and quantitative analysis of hexamine cobalt (III) chloride
3. Preparation of cis and trans-dichloro bis (ethylenediamine) cobalt (III) chloride.
4. Preparation of potassium trisoxalato ferrate (III).
5. Simultaneous determination of chromium and manganese in a solution by visible spectroscopy
6. Quantitative estimation of iron and aluminum from an inorganic mixture by volumetric method followed by gravimetric method.

7. Quantitative estimation of copper and nickel from an inorganic mixture by volumetric method followed by gravimetric method.
8. Quantitative estimation of copper and iron (as Fe_2O_3) from an inorganic mixture by volumetric method followed by gravimetric method.
9. Quantitative estimation of zinc and calcium form an inorganic mixture by volumetric method followed by gravimetric method.
10. Quantitative estimation of zinc and magnesium form an inorganic mixture by volumetric method followed by gravimetric method.

5. Course Map (CO-PO-PSO Map)

	Programme Specific Outcomes (PSOs)												
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO-1				3							3		
CO-2				3							3

Course Specifications: Seminar 1

Course Title	Seminar 1
Course Code	CYS517A
Course Type	Laboratory Course
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to train students to conduct independent study a topic of relevance and deliver a seminar.

The student is expected choose a topic of relevance and conduct independent study. The student is also expected to submit a report and present the same.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	0:0:2
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-1. Conduct a thorough literature review and submit a review article / scientific report
CO-2. Make a presentation to a panel of examiners

4. Course Contents

Choose the relevant research topic

Study the literature and give a seminar

Prepare a review article/ scientific report and give a presentation on the same topic

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)

Semester 2

Course Specifications: Physical Chemistry 2

Course Title	Physical Chemistry 2
Course Code	CYC521A
Course Type	Core Theory
Department	Chemistry
Faculty	Faculty of Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to introduce students to fundamentals and applications of certain aspects of Physical Chemistry.
In this course the students are taught the laws of thermodynamics and their applications, principles of spectroscopy, electrochemistry, and kinetics. They are also taught about macromolecules and surface chemistry. Emphasis is given on Approximate methods of quantum mechanics and numerical.

2. Course Size and Credits:

Number of Credits	04
Credit Structure (Lecture: Tutorial: Practical)	4:0:0
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-1. Classify the polymers, mechanisms of enzyme, chemical kinetics, adsorption isotherms, wave functions and thermodynamic functions

CO-2. Outline the chemistry & properties of polymers, mechanism & kinetics of polymerization, term symbols, perturbation theory, factors affecting surface activity and over potential, RS and JJ-coupling. Spin-orbital interaction and term multiplicities, Zeeman effect

CO-3. Discuss the principles of quantum mechanics approximate methods, rotational, vibrational, Raman and electronic spectra, theories & kinetics of electrochemistry, corrosion of metals, polarography, amperometry, effect of various parameters on activity of catalysts/enzymes, theories of unimoleuclar reactions, radial and angular distribution function and their significance

CO-4. Apply the spectroscopic information to determine structure & properties of compounds, thermodynamic concepts & laws to determine nature of chemical interactions, various parameters which can influence catalysis to predict the surface activity/chemical reactions, electrochemical theories and properties to understand

various electrochemical systems and quantum mechanical concepts in real life problems

CO-5. Solve numerical based on electrochemistry, polymers, quantum chemistry, spectroscopy, kinetics, thermodynamics and surface chemistry

4. Course Contents

Quantum Chemistry II:

Schrödinger equation to hydrogen atom in spherical polar co-ordinates. Solution of ϕ, θ, equation and statements of solution of R equation. Total wave functions of hydrogen atom. Quantum numbers and their characteristics. List of wave functions for few initial states of hydrogen like atoms. Diagrams of radial and angular wave functions. Radial and angular distribution function and their significance. Electron - spin, spin-orbital, anti-symmetry and Pauli-exclusion principle, Slater determinants. Numerical on effective nuclear charge. Coupling of Angular momenta. Russell-Saunders and JJ-coupling, Term symbols (both atomic and molecular). Spin-orbital interaction and explanation of term symbols. Zeeman effect. Approximate methods: Need for approximate methods. Perturbation method. Rayleigh Schrödinger perturbation theory for time-independent non-degenerate system

Spectroscopy:

Rotational spectra of diatomic and polyatomic molecules. Applications of microwave spectra, Numerical. Vibrational spectra of diatomic and polyatomic molecules. Rotation-vibration spectra of diatomic and polyatomic molecules. Raman spectroscopy, Scattering phenomena, rotational Raman spectrum of diatomic molecules, rotation-vibration Raman spectrum. Electronic spectra, Frank-Condon principle. Explanation on spectral line intensity based on Frank-Condon principle.

Chemical Kinetics II:

Enzyme kinetics – Mechanism and kinetic of enzyme catalyzed reactions, host guest interactions, derivation Michaelis-Menton equation and interpretation, Significance of Michaelis-Menten constant, Numerical. Lineweaver-Burk plots, autocatalysis and oscillatory reactions. Effects of enzyme concentration, pH, Temperature, Activators and Inhibitors on enzyme activity. Theories of unimoleuclar reactions- Perrin theory, Lindemann theory.

Surface chemistry- Types of adsorption isotherms, Effect of temperature on adsorption, Mechanical adsorption, Estimation of surface area using BET equation, Gibbs adsorption isotherm and its significance, Surface tension and surface energy, Pressure difference across curved surface (Laplace equation), Vapour pressure of droplets (Kelvin equation), Surface film on liquids (electro-kinetic phenomena), Catalytic activity of surfaces.

Electrochemistry II:

Structure of electrified interface: Electrical capacitance, Helmholtz theory, Guoy- Chapman theory, Stern model. Electrocatalysis, Valcano plots and Kinetics of electrode reactions. Overpotential: Concentration overpotential and activation overpotential, Derivation of Butler-volmer equation. Electrochemical Corrosion of metals. Polarography: Ilkovic equation, half wave potential and its significance, Amperometric titrations, types and applications.

Macromolecules:

Introduction, classification, polymerization reactions, Kinetics of addition and condensation polymerization. Molar mass of polymers, determination of molar mass of polymers – Number-average, mass-average and viscosity-average methods. Numerical problems. Conducting polymers and mechanism.

Course Specifications: Inorganic Chemistry 2

Course Title	Inorganic Chemistry 2
Course Code	CYC522A
Course Type	Core Theory
Department	Chemistry
Faculty	Faculty of Mathematical and Physical Sciences

1. Course Summary

The aim of this Course is to introduce students to the basic and advanced concepts of Inorganic Chemistry. The student will be introduced to the application of group theory to understand the structure and spectroscopic properties of molecules. The coordination chemistry and reaction mechanisms therein will be elaborated. The molecular orbital theory and its importance in the chemistry of coordination complexes will be highlighted. The chemistry of several important categories of inorganic compounds such as metallocenes, metal carbonyls and compounds containing metal-metal bonds will be covered. The student will learn the principles of bio-inorganic chemistry.

2. Course Size and Credits:

Number of Credits	04
Credit Structure (Lecture: Tutorial: Practical)	4:0:0
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- **CO-1.** Outline the principles of the character table construction, Orgel diagrams and molecular orbital theory and correlate to the crystal structures, spectroscopic and magnetic properties of coordination complexes, stereochemistry of the co-ordination numbers from 2 to 6
- **CO-2.** Differentiate between closo/nido/arachno boranes, ligand substitution mechanism in square planar and octahedral complexes, d-d transition and charge transfer spectra
- **CO-3.** Predict the properties of a coordination complexes from the molecular orbital theory and LFT, and explain Metal ion storage and transport properties of biological systems, Factors affecting stability constant in solution
- **CO-4.** Discuss the concepts of group theory, chemistry of solid state materials, bonding and structures in organometallic compounds, the relevance of Orgel diagrams and transport and storage of dioxygen; haemoglobin, myoglobin and phenomenon of cooperativity, stability constants
- **CO-5.** Illustrate the potential applications of organometallic compounds and metal complexes; gold complexes and platinum complexes in medicine; Photosynthesis; chlorophyll, PS I, PS II, Biochemical importance of NO, Role of Ca in signal transduction, porphyrins, nitrogen fixation

4. Course Contents

Coordination Compounds and Reaction Mechanisms:
Metal – Ligand Bonding: Review of basic concepts of co-ordination chemistry. Stereochemistry of complexes with coordination Nos. 2 to 12, types of Ligands, crystal field splitting in various ligand fields, structural and thermodynamic effects of crystal field splitting- octahedral ionic radii, Jahn – Teller distortion in metal complexes and metal chelates, hydration and lattice energies, Iriving-William stability order; spectrochemical series, limitations of crystal field theory, Evidences for metal – ligand orbital overlap, LFT (ACFT), nephelauxetic series, MO theory and diagrams of octahedral complexes (including π-bonding),
Factors affecting stability constant in solution – Methods of determination of stability constant, Mechanism of substitution reactions in square planar and octahedral complexes and trans effects, Mechanisms of Redox reactions.
Determination of binary formation of stability constant by pH measurements, spectrophotometry, polarography and ion exchange methods

Spectroscopic and Magnetic properties of Transition Metal Complexes:
Spectroscopic ground states, selection rules, term symbols for dn ions, Racah parameters, Orgel, correlation and Tanabe-Sugano diagrams, spectra of 3d metal aqua complexes of trivalent V, Cr, divalent Mn, Co and Ni, $[CoCl_4]^{2-}$, calculation of Dq, B and β parameters, charge transfer spectra.
Origin and types of magnetic behaviour- diamagnetism, paramagnetism, ferro and antiferromagnetism, magnetic susceptibility and its measurement by the Guoy method, temperature dependence of magnetism – Curie and Curie-Weiss laws, types of paramagnetic behaviour – spin-orbit coupling.

Organometallic Chemistry: Classification of Organometallic compounds based on the nature of metal-carbon bond, Bonding in pi-metal complexes, Metallocenes; Metal carbonyls; Compounds containing metal-metal bonds.
Synthesis Bonding in pi-metal complexes, Metallocenes; Metal carbonyls; Compounds containing metal-metal bonds, Industrial Applications of organometallic compounds.

Symmetry and Group Theory:
Symmetry elements and symmetry operations, Definition of groups and subgroups, and group multiplication tables. Conjugate relationships, classes of operations, representation of symmetry operations as matrices, reducible and irreducible representations, characters of representations, great orthogonality theorem (without proof) and its corollaries, properties of irreducible representations. Mulliken's symbols for irreducible representations. Character tables of Cnv, Cnh, Dnh and Cn point groups (derivation of character table only for Cnv point group). Applications of character tables in vibrational, electronic spectroscopy, crystal field splitting.

Bioinorganic Chemistry:
Essential and trace elements in biological systems, metal complexes in medicine; Metal ion storage and transport; Ferritin, transferrin, oxygen transport, phenomenon of cooperativity, model systems (picket fence porphyrins), hemocyanin and hemerythrin, electron-transfer reactions; Rubredoxin, ferredoxins, cytochromes. Photosystems PS I, PS II. Nitrogen fixation: bacterial nitrogenase system. Biochemical importance of NO, Role of Ca in signal transduction, porphyrins, nitrogen fixation.

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO-1	3										3		
CO-2	3										3		
CO-3	3		2								3	2	
CO-4	3										3		
CO-5	3		2								3		
3: Very Strong Contribution, 2: Strong Contribution, 1: Moderate Contribution													

6. Course Teaching and Learning Methods

Teaching and Learning Methods	Duration in hours	Total Duration in Hours
Face to Face Lectures		58
Demonstrations		02

Total Duration in Hours		**70**

7. Course Assessment and Reassessment

The details of the components and subcomponents of course assessment are presented in the Programme Specifications document pertaining to the M.Sc. (Organic Chemistry) Programme. The procedure to determine the final course marks is also presented in the Programme Specifications document.

Dean – Academic Affairs
Ramaiah University of Applied Sciences
Bangalore

The evaluation questions are set to measure the attainment of the COs. In either component (CE or SEE) or subcomponent of CE (TSC1, TSC2, TSC3), COs are assessed as illustrated in the following Table.

Focus of COs on each Component or Subcomponent of Evaluation				
	Component 1: CE (50% Weightage)			Component 2: SEE (50% Weightage)
Subcomponent ▶	TSC1	TSC2	TSC3	
Subcomponent Type ▶	Mid Term Test	Assignment	Innovative	100 Marks
Maximum Marks ▶	50	25	25	
CO-1	X		X	X
CO-2	X		X	X
CO-3		X	X	X
CO-4	X	X	X	X
CO-5	X	X	X	X
The details of TSC1, TSC2, TSC3 are presented in the Programme Specifications Document.				

The Course Leader assigned to the course, in consultation with the Head of the Department, shall provide the focus of COs in each component of assessment in the above template at the beginning of the semester.

Course reassessment policies are presented in the Academic Regulations document.

8. Achieving COs

The following skills are directly or indirectly imparted to the students in the following teaching and learning methods:

S. No	Curriculum and Capabilities Skills	How imparted during the course
1.	Knowledge	Classroom lectures
2.	Understanding	Classroom lectures, Self-study
3.	Critical Skills	Assignment
4.	Analytical Skills	Assignment
5.	Problem Solving Skills	Assignment, Examination
6.	Practical Skills	Assignment
7.	Group Work	--
8.	Self-Learning	Self-study
9.	Written Communication Skills	Assignment, Examination
10.	Verbal Communication Skills	--
11.	Presentation Skills	--
12.	Behavioral Skills	--
13.	Information Management	Assignment
14.	Personal Management	--
15.	Leadership Skills	--

Course Specifications: Organic Chemistry 2

Course Title	Organic Chemistry 2
Course Code	CYC523A
Course Type	Core Theory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to introduce students to various named reactions, oxidation reduction reagents, molecular arrangements, nucleic acids and proteins.
Students will be able to analyses and select appropriate reagents, reaction conditions and synthons for synthesis of various organic molecules. Emphasis is given on natural products and their applications in various industries.

2. Course Size and Credits:

Number of Credits	04
Credit Structure (Lecture: Tutorial: Practical)	4:0:0
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- **CO 1.** Discuss the reactive intermediates, stereochemistry, oxidation and reduction, molecular rearrangements reaction mechanisms, pericyclic reactions, sigmatropic reactions, heterocyclic compound synthesis, named reaction, natural products, nucleic acids, protein structure and reagents in organic synthesis
- **CO 2.** Illustrate nucleophilic, electrophilic, radical reactions, specific reagents for oxidation and reduction, heterocyclic reactions and organometallic reagents
- **CO 3.** Identify heterocyclic motifs, reagents, named reaction, molecular rearrangements, stereochemistry in natural products and drug molecules
- **CO 4.** Apply named reaction, heterocyclic synthesis, and organic reagents for synthesis of natural and pharmaceutically important products
- **CO 5.** Design small organic molecules considering factors such as stereochemistry and reagents for various applications

4. Course Contents

Oxidizing and Reducing agents in Organic Chemistry:

Oxidizing Agents: Oxidation with chromium and manganese reagents (CrO_3, $K_2Cr_2O_7$, PCC, PDC, Jones reagent, MnO_2, $KMnO_4$), Pb (OAC)4, NBS, SeO_2, $KMnO_4$, OsO_4, Sommelet oxidation, Oppenauer oxidation, Fenton's reagent, Sharpless epoxidation.

Reducing Agent: Catalytic hydrogenation (homogeneous and heterogeneous, reduction by dissolving metals (Na, Pd, Mg). reduction by hydride transfer (NABH4, LiAlH4, Al-t- BuO, DIBAL-H, NaCNBH4), selectivity in, diborane as reducing agent, tributyl tinhydride, stannous chloride, Bakers yeast, Organoboron compounds.

Named Reactions: Mechanism of Named Reactions:

Arndt-eistert reaction, Baylis–Hillman Reaction, Curtius Reaction, Gabriel Synthesis, Haloform Reaction, Heck Reaction, Hell–Volhard–Zelinskii Reaction, Knoevenagel Reaction, Kolbe–Schmitt Reaction, Lossen Reaction, Mannich Reaction, McMurry Reaction, Michael Reaction, Mitsunobu Reaction, Nef Reaction, Paterno–Buchi Reaction, Robinson Annulation, Sakurai Reaction, Schmidt Reaction, Stork Enamine Reaction, Strecker Synthesis, Vilsmeier Reaction, Weiss Reaction, Wittig Reaction and its application in organic synthesis.

Molecular Rearrangements:

General mechanistic considerations, Rearrangement to electron deficient carbon; Pincol –Pinacolone, Wagner –Meerwein, Dinenone-phenol, Allylic, Rearrangement to electron deficient nitrogen; Hofmann, Curtius, Schmidt, Lossen, Beckmann, rearrangement to
electron deficient oxygen atom; Bayer-Villiger, Dakin, Rearrangement to electron rich atom; Favorskii, Wittig, Stevens, Intramolecular rearrangement; Claisen, Benzidine, Fries rearrangement.

Reagents in Organic Synthesis:

Complex Metal Hydrides, Gilman's Reagent, Lithium Dimethylcuprate, Lithium Disopropylamide (LDA), N,N'-Dicyclohexylcarbodimide (DCC), 1,3-Dithiane (Reactivity Umpolung), DDQ, Green chemistry (Phase Transfer Catalysts, Crown Ethers, Merrifield Resin), Peterson's Synthesis, Wilkinson's Catalyst, Baker Yeast.

Amino Acids and Peptides:

Synthesis and reactions of amino acids. Classification and nomenclature of peptides. Sanger and Edman methods of sequencing. Cleavage of peptide bond by chemical and enzymatic methods. Peptide synthesis- Protection of amino group (Boc-, Z- and Fmoc-) and carboxyl group as alkyl and aryl esters. Use of DCC, EEDQ, HOBt and active esters, acid halides, anhydrides in peptide bond formation reactions. Deprotection and racemization in peptide synthesis. Solution and solid phase techniques. Introduction to peptidomimetics.

Protein Structure:

Primary and secondary structure of proteins: alpha helix, beta-pleated sheet, tertiary structure of proteins: Covalent bonds, Ionic bonds, hydrogen bonds, Van der Waals bonds, repulsive forces, Relative importance of binding forces, the quaternary structure of proteins

Nucleic acids: Structure of DNA: Primary, secondary and tertiary structure of DNA, Interaction of drugs on DNA

Chemistry of Natural Products:

Carotenoids, Flavanones, Plant Pigments, Porphyrins: Prostaglandins: Classification, nomenclature, occurrence, isolation, general methods of structure determination, isoprene rule.

Pericyclic reactions:

Introduction, molecular orbital symmetry, frontier orbitals of ethylene, 1, 3-butadiene, thermal and photochemical reactions, classification of pericyclic reactions: Electrocyclic reactions, Sigmatropic reactions and Cycloaddition reactions

Course Specifications: Computational Methods in Chemistry

Course Title	Computational Methods in Chemistry
Course Code	CYC524A
Course Type	Core Theory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this Course is to introduce students to the concept of computational chemistry

Computational chemistry helps chemists to make predictions before running the actual experiments and to be better prepared for making observations. Students are taught the basic mathematics that are relevant to chemists. Emphasis is given on concepts of computer modeling and simulation including ab initio approaches based on quantum chemistry and empirical approaches to study the structures and properties of molecules and materials.

2. Course Size and Credits:

Number of Credits	04
Credit Structure (Lecture: Tutorial: Practical)	4:0:0
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- **CO-1.** Differentiate theoretical approaches such as HF(Hartree-Fock), DFT(Density Functional Theory) and force field methods
- **CO-2.** Identify various methods for simulating/modeling various scientific problems and discuss their advantages/disadvantages
- **CO-3.** Illustrate the principles of differentiation, integration and data modeling
- **CO-4.** Assess and recommend suitable computational chemistry tool for theoretical predictions
- **CO-5.** Apply semi-empirical and computational modeling to make theoretical predictions of outcome of a reaction, suitable methods for calculating electronic properties of simple molecules and crystals

4. Course Contents

Vectors and Matrices: Linear algebra, linear system, eigen values and eigen vectors, applications of matrices
Differentiation and Integration: Differential calculus with functions of single variable, different methods of evaluating integrals, Numerical integration by trapezoidal and Simpson's rule

Data Modelling: Interpolation, curve fitting by least square method.

Hartree Self-Consistent Field method. Spin orbitals for many electron atoms symmetric and antisymmetric wave functions. Pauli's exclusion principle. Slater determinants. Qualitative treatment of Hartree-Fock Self-Consistent Field (HFSCF) method. Roothan's concept of basis functions, Slater type orbitals (STO) and Gaussian type orbitals (GTO), sketches of STO and GTO

Computational chemistry as a tool and its scope: Potential energy surface: stationary points, concept of transition state with examples, local and global minima, Hessian Matrix.
Molecular mechanics methods: force fields-bond stretching, angle bending, torsional terms, non-bonded interactions, electrostatic interactions. Mathematical expressions. Radial distribution, functions, Important features of commonly used force fields like MM3, MMFF, AMBER, OPLS and CHARMM

Ab initio methods: Hartree Self-Consistent Field method. Spin orbitals for multi electron systems symmetric and antisymmetric wave functions. Pauli's exclusion principle. Slater determinants. Qualitative treatment of Hartree-Fock Self-Consistent Field (HFSCF) method. Roothan's concept of basis functions, Slater type orbitals (STO) and Gaussian type orbitals (GTO), sketches of STO and GTO. Basis set approximation, Classification of basis sets - minimal, double zeta, triple zeta, split valence, polarization and diffuse basis sets, contracted basis sets, Pople style basis sets and their nomenclature, correlation consistent basis sets, Hartree-Fock limit. Electron correlation. Qualitative ideas on post Hartree-Fock methods-variational method, basic principles of Configuration Interaction (CI). Perturbational methods-basic principles of Møller Plesset Perturbation Theory.

General introduction to semi-empirical methods: Huckel MOT with suitable examples: ethane, propenyl and other systems, Calculation of properties- energy, delocalization energies, bond order. Introduction to Density Functional Theory (DFT) methods: Hohenberg-Kohn theorems. Kohn-Sham orbitals. Exchange correlation functional. Local density approximation. Generalized gradient approximation. Hybrid functionals (basic principles and terms). Comparison of molecular mechanics, ab-initio, and DFT methods. .

Computational Chemistry Calculations: Molecular geometry input-Cartesian coordinates and internal coordinates, Z-matrix. Z-matrix of single atom, diatomic molecule, non-linear triatomic molecule, linear triatomic molecule, polyatomic molecules. General format of GAMESS / ORCA input files. GAMESS / ORCA key word for: basis set selection, method selection, charge, multiplicity, single point energy calculation, geometry optimization, constrained optimization and frequency calculation.

Course Specifications: Computational Techniques in Chemistry

Course Title	Computational Techniques in Chemistry
Course Code	CYL525A
Course Type	Laboratory Course
Department	Chemistry
Faculty	Faculty of Mathematical and Physical Sciences

1. Course Summary

This course intends to train the students to perform quantitative analysis related to physical and computational chemistry.

Students are trained to determine physical and chemical properties of given samples. They are trained to analyze the results and infer appropriate conclusions based on concepts of physical and inorganic chemistry.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	0:0:2
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- **CO-1.** Plan the experimental setup to achieve the stated aim
- **CO-2.** Conduct experiments as per the standard procedures and tabulate the measured values
- **CO-3.** Calculate the required parameters and plot the results
- **CO-4.** Interpret, compare with standard results and draw conclusions
- **CO-5.** Write laboratory report as per the prescribed format

4. Course Contents

List of Experiments:

1. Draw and perform the geometry optimization of the given structures using semi-empirical method.

Azulene Naphthalene

2. Calculate the HOMO-LUMO energy gaps in conjugated systems.
3. Determine the UV-Vis spectra of unsubstituted and substituted azulene structures using suitable computational methods.

2-methylazulene azulene-2-carbaldehyde 1-fluoroazulene

4. Optimize the di-atomic and tri-atomic molecules using DFT and determine the bond length, bond angle and dipole moment.
5. Perform geometry optimization and energy calculation on the following molecules. Visualize the frontier molecular orbitals and interpret the results for bonding in following molecules. Benzene, Naphthalene, and Azulene.
6. Perform the frequency analysis of given set of molecules and determine IR spectra.
7. Plot electrostatic potential map (ESP) surface of given molecule and predicts the electron rich and electron deficient sites.
8. Study the mechanism of SN2 reaction.
9. Calculate the ionization potential (IP) and electron affinity (EA) of a given set of molecules using fundamentals of conceptual DFT.

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3

7. Course Assessment and Reassessment

The details of the components and subcomponents of course assessment are presented in the Programme Specifications document pertaining to the M.Sc. (Organic Chemistry) Programme. The procedure to determine the final course marks is also presented in the Programme Specifications document.

The evaluation questions are set to measure the attainment of the COs. In either component (CE or SEE) or subcomponent of CE (LSC1, LSC2) COs are assessed as illustrated in the following Table.

Focus of COs on each Component or Subcomponent of Evaluation			
	Component 1: CE (50% Weightage)		**Component 2: SEE (50% Weightage)**
Subcomponent ▶	**LSC1**	**LSC2**	
Subcomponent Type ▶	**Lab Report**	**Term Test**	**50 Marks**
Maximum Marks ▶	**25**	**25**	
CO-1	**X**	**X**	**X**
CO-2	**X**	**X**	**X**
CO-3	**X**	**X**	**X**
CO-4	**X**	**X**	**X**
CO-5	**X**	**X**	
The details of LSC1, LSC2 are presented in the Programme Specifications Document.			

The Course Leader assigned to the course, in consultation with the Head of the Department, shall provide the focus of COs in each component of assessment in the above template at the beginning of the semester.

Course reassessment policies are presented in the Academic Regulations document.

8. Achieving COs

The following skills are directly or indirectly imparted to the students in the following teaching and learning methods:

S. No	Curriculum and Capabilities Skills	How imparted during the course
1.	Knowledge	Laboratory instruction
2.	Understanding	Laboratory instructions and experiments
3.	Critical Skills	Laboratory work
4.	Analytical Skills	Laboratory work
5.	Problem Solving Skills	Laboratory work
6.	Practical Skills	Laboratory work
7.	Group Work	Laboratory work

8.	Self-Learning	Laboratory work
9.	Written Communication Skills	Laboratory work, examination
10.	Verbal Communication Skills	Laboratory examination

Course Specifications: Qualitative and Quantitative Analysis of Organic Compounds

Course Title	Qualitative and Quantitative Analysis of Organic Compounds
Course Code	CYL526A
Course Type	Laboratory Course
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

This course intends to train the students to perform qualitative and quantitative analysis of organic compounds.
Students are trained to prepare some of the organic compounds and carry out the qualitative and quantitative analysis of organic compounds. They are trained to analyze the results and infer appropriate conclusions based on concepts of organic chemistry.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	0:0:2
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO 1. Setup the experimental apparatus required to achieve the stated aim
CO 2. Conduct experiments as per the standard procedures and tabulate the measured values
CO 3. Calculate the required parameters and plot the results
CO 4. Interpret and draw conclusions
CO 5.Write laboratory report as per the prescribed format.

4. Course Contents

I. Qualitative analysis of organic compounds (Any four types):

a. The Systematic analysis of a two component/three component mixture involves the following:
1. Nature of the mixture
2. Type of the mixture
3. Separation of the mixture into two/three components.

II. Systematic analysis of each component involves the following:
1. Preliminary Tests.
2. Detection of elements.
3. Detection of the functional group.
4. Physical constants. (M.P. or B.P.)
5. Conformation with preparation of derivatives.

6. Result

II. Qualitative Analysis of organic compounds (Any two):

1. Estimation of sugar
2. Estimation of amines
3. Estimation of amine salts
4. Estimation of carboxylic acid
5. Estimation of salts of carboxylic acid

III. One pot synthesis (Any two):

1. Preparation of aspirin from salicylic acid
2. Preparation of paracetamol from p-aminophenol
3. Preparation of m-dinitrobenzene from nitrobenzene

5. Course Map (CO-PO-PSO Map)

											Programme Specific Outcomes (PSOs)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3

Course Specifications: Seminar 2

Course Title	Seminar 2
Course Code	CYS527A
Course Type	Laboratory Course
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to train students to conduct independent study a topic of relevance and deliver a seminar.

The student is expected choose a topic of relevance and conduct independent study. The student is also expected to submit a report and present the same.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	0:0:2
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-1. Conduct a thorough literature review and submit a review article / scientific report
CO-2. Make a presentation to a panel of examiners

4. Course Contents

Choose the relevant research topic

Study the literature and give a seminar

Prepare a review article/ scientific report and give a presentation on the same topic

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)

Semester 3

Course Specifications: Retrosynthetic, Stereochemical and Spectroscopic Analysis

Course Title	Retrosynthetic, Stereochemical and Spectroscopic Analysis
Course Code	CYC651A
Course Type	Core Theory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to introduce students to advanced concepts of organic chemistry that help to design the molecules.

Students are taught the concepts of retrosynthetic pathways to construct the molecules with appropriate reagents, methods and stereochemistry of the product. Students will be able to identify the sythesised molecule with the help of spectroscopic techniques. Emphasis is given on Retrosynthetic Analysis of natural products and synthetic drugs.

2. Course Size and Credits:

Number of Credits	03
Credit Structure (Lecture: Tutorial: Practical)	3:0:0
Total Hours of Interaction	45
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- **CO-1.** Discuss the use of Stereo selective reactions, Retrosynthetic and Spectroscopic Analysis for the
- **CO-2.** Illustrate the retrosynthetic strategy, reagents named reactions, stereochemistry to construct
- **CO-3.** Identify the retro synthetic pathways, synthons, reagents, reaction mechanism, Stereochemistry and structural elucidation oforganic molecules
- **CO-4.** Apply the retrosynthetic strategy, reagents, named reactions, stereochemistry during the synthesis of new entities
- **CO-5.** Recommend spectroscopic methods to identify the synthesized natural and pharmaceutical products

4. Course Contents

Retrosynthetic Analysis: Protection and deprotection: Carbonyls, amines, thiols and alcohols Retrosynthetic analysis: Definition and terminologies: Target, synthon, synthetic equivalent, functional group interconversion (FGI), functional group addition, functional group protection and deprotection Criteria for selection of target. Linear and convergent synthesis. Guidelines for disconnection approach, Retrosynthetic analysis and synthesis involving: Chemo-, regio- and stereo selective functional groups interconversion. Reversal of polarity (Umplong) and cyclizations, Criteria for disconnection of strategic bonds: One group C-X and C-C Disconnections: Alcohols, Carbonyl compounds, Amines, heterocyclic compounds Two group C-X disconnection and two group C-C Disconnections: Alcohols, ethers and sulphides and Carbonyl compounds: Diels-Alder reaction 1,2; 1,3; 1,4;1,5- bi- functionalized compounds, α β unsaturated carbonyl compounds, Michael addition, Aldol condensation, and Robinson annulation.

Advanced stereochemistry: Molecular Symmetry and Chirality: Homotopic and Heterotopic Ligands and Faces, Enantiotopic; Diastereotopic compounds.
Prochiral nomenclature: Pro chirality and Pro-R, Pro-S, Re and Si.
Chiral Substrate controlled asymmetric synthesis: Nucleophilic additions to chiral carbonyl compounds. 1, 2- asymmetric induction, Cram's rule and Felkin- Anh model.
Strategies of Asymmetric Synthesis: Chiral pool synthesis or chiron approach and Chiral auxiliary approach; Advantages and dis- advantages of chiral pool synthesis.
Asymmetric Synthesis via Substitution Reactions, New Chiral Centers through substitution reactions, synthesis of natural and unnatural amino acids, Asymmetric Enolate Alkylation; Enantiomeric excess, diastereoselective excess, Resolution of racemic mixtures through chiral reagents.

Spectroscopy of organic molecules: UV spectral study of alkenes, polyenes, enones and aromatic compounds. Empirical rules for calculating λmax, Identification of the following organic compounds by IR: Alkanes, Alkenes, Alkynes, Aromatic compounds, Aldehydes, Ketones, Alcohols, Acids, Acid chlorides, Amides, Amines, Esters, Halides, Nitro compounds, etc., Advanced 1HNMR: Interaction of nuclear spin and magnetic moment, spin-spin splitting, coupling constants, complex spin-spin interaction between two, three, four and five nuclei (first order spectra), Carbon-13 NMR spectroscopy and Mass spectroscopy. Problems using UV, IR, NMR and Mass Spectroscopy.

Course Specifications: Photochemical, Pericyclic and Organocatalytic Reaction

Course Title	Photochemical, Pericyclic and Organocatalytic Reaction
Course Code	CYC652A
Course Type	Core Theory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to introduce the principles behind the photochemical and pericyclic reactions.

Students will be to discuss the mechanism of various organometallic reagents, photochemical and pericyclic reactions. Emphasis will be given on the selection of suitable organometallic reagents to increase the yield, introduce stereochemistry to product.

2. Course Size and Credits:

Number of Credits	03
Credit Structure (Lecture: Tutorial: Practical)	3:0:0
Total Hours of Interaction	45
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO 1. Discuss the principles of Photocycloaddition, Norrish type I and type II, photo degradation, electrocyclic, pericyclic addition, sigma tropic rearrangements and Organocatalytic reactions

CO 2. Identify the use of Photochemical, Pericyclic and Organometallic reactions in organic synthesis and in biomedical applications

CO 3. Illustrate photocycloaddition, Norrish type I and type II, photo degradation, pericyclic cyclo addition, sigma tropic rearrangements, radical chemistry and methods for synthesizing complex organic molecules

CO 4. Recommend Organo metallic complexes, oxidative addition and reductive elimination, nucleophilic and electrophilic addition for synthesis of industrially important molecules

CO 5. Assess the suitability of photochemical, pericyclic reaction, organometallic Chemistry for synthesis of natural and pharmaceutical products

4. Course Contents

Photochemistry: Recap of Franck-Condon principle, Jablonski diagram, fluorescence and phosphorescence, Singlet and triplet states, Photosensitization, Quantum efficiency.
Importance of Photochemistry, Laws of Photochemistry: Grothus-Draper Law, Stark-Einstein's Law, Laws of light absorption.
Reactions: Photochemistry of alkene, cis-trans isomerization, photocycloaddition reactions of alkene, photochemical electrocyclic and sigmatropic reactions, di-pimethane rearrangment, electron transfer mediated reactions of alkene. Photochemistry of carbonyl compounds, Norrish type I and type II reactions, enone and dienone cycloadditions. Photochemistry of aromatic systems, electron transfer and nucleophilic substitution reactions. Photochemistry of nitro, azo and diazo compounds. Photochemistry involving molecular oxygen, generation and reactions of singlet oxygen. Photo-fragmentation reactions (Barton, Hofmann-Loffler-Freytag) Application of photochemical reactions in synthesis– Isocomene, Cedrene, Ladderane and Vitamin D3.
Pericyclic Reactions: Cycloaddition reactions: Supra and antra facial additions, 4n and 4n+2 systems, 2+2 additions of ketenes. Woodward-Hoffmann description for thermal and photochemical reaction Diels-Alder reactions, 1, 3-Dipolar cycloaddition and cheletropic reactions, ene reaction, retro-Diels-Alder reaction, regioselectivity, periselectivity, torquoselectivity, site selectivity and effect of substituents in Diels-Alder reactions. Other Cycloaddition Reactions- [4+6] Cycloadditions, Ketene Cycloaddition, Allene Cycloadditions, Carbene Cycloaddition, Epoxidation and Related Cycloadditions. Sigmatropic Rearrangements: H-shifts and C-shifts, supra and antarafacial migrations, retention and inversion of configurations. Cope (including oxyCope and aza-Cope) and Claisen rearrangements. Formation of Vitamin D from 7-dehydrocholesterol, synthesis of citral using pericyclic reaction, conversion of Endiandric acid E to Endiandric acid A. Electrocyclic reactions: Conrotatory and disrotatary motions, 4nπ and (4n+2) π electron and allyl systems. Woodward-Hoffmann description for thermal and photochemical reaction.Application of Pericyclic reactions in synthesis – Endiandric acids A – D.
Organometallic Chemistry: Nomenclature, Structure, Reactivity, Basicity; Preparations of Organometallic Reagents: Organolithiums, Organomagnesium or Grignards, Dialkyllithium cuprates, Organozinc reagents, Organo baron's, Acetylides, RC≡CM; Reactions involving Organometallic Reagents: Overview of Reactions, Overview of Grignard Reactions, Addition of RLi and RMgX to Aldehydes and Ketones, Addition of RC≡CM to Aldehydes and Ketones, Addition of RLi and RMgX to Esters, Alkane synthesis using R2CuLi, Reactions of RZnX: Simmons-Smith cyclopropanation, Oxymercuration-Demercuration of Alkenes. Organosilicons: Introduction, preparation and general reactions of trialkylsilyl halides. Peterson olefination. Organotins: Preparation and reactions of tri-n-butyltin hydride, Barton decarboxylation and Barton- McCombie reaction. Organozincs: Preparation, reaction with C-C multiple bonds, Simmons-Smith, and Reformatsky reaction. Organopaladiumcatalyzed carbon-carbon crosscoupling reactions. Oxidative addition. Transmetalation. Mechanistic aspects of Suzuki Coupling, Kumada coupling, Sonogashira.
Bioorganometallic Chemistry: Named Reactions: Stille Coupling Reaction, Heck coupling, Alkene Metathesis, Negishi and Sonogashira, Nozaki-Hiyama, Buchwald-Hartwig, Ullmann coupling reactions, Sharpless Epoxidation, Swern Oxidation, Wolff–Kishner Reduction and its application in organic synthesis.
Biomedical Applications: Use of gold for treatment of Rheumatoid Arthritis. Anticancer drugs: Platinum complexes, toxic effect of Pt-complexes, nonactivity of trans-platin. Bismuth compounds in medicines, Vanadium compounds as Insulin mimetic agents in treatment of diabetes.

Total Duration in Hours		**70**

7. Course Assessment and Reassessment

The details of the components and subcomponents of course assessment are presented in the Programme Specifications document pertaining to the M.Sc. (Organic Chemistry) Programme.

The procedure to determine the final course marks is also presented in the Programme Specifications document.

The evaluation questions are set to measure the attainment of the COs. In either component (CE or SEE) or subcomponent of CE (TSC1, TSC2, TSC3), COs are assessed as illustrated in the following Table.

Focus of COs on each Component or Subcomponent of Evaluation				
	Component 1: CE (50% Weightage)			Component 2: SEE (50% Weightage)
Subcomponent ▶	TSC1	TSC2	TSC3	
Subcomponent Type ▶	Mid Term Test	Assignment	Innovative	100 Marks
Maximum Marks ▶	50	25	25	
CO-1	X		X	X
CO-2	X		X	X
CO-3	X		X	X
CO-4		X	X	X
CO-5	X	X	X	X
The details of TSC1, TSC2, TSC3 are presented in the Programme Specifications Document.				

The Course Leader assigned to the course, in consultation with the Head of the Department, shall provide the focus of COs in each component of assessment in the above template at the beginning of the semester.

Course reassessment policies are presented in the Academic Regulations document.

8. Achieving COs

The following skills are directly or indirectly imparted to the students in the following teaching and learning methods:

S. No	Curriculum and Capabilities Skills	How imparted during the course
1.	Knowledge	Classroom lectures
2.	Understanding	Classroom lectures, Self-study
3.	Critical Skills	Assignment
4.	Analytical Skills	Assignment
5.	Problem Solving Skills	Assignment, Examination
6.	Practical Skills	Assignment
7.	Group Work	--
8.	Self-Learning	Self-study
9.	Written Communication Skills	Assignment, Examination
10.	Verbal Communication Skills	--
11.	Presentation Skills	--
12.	Behavioral Skills	--
13.	Information Management	Assignment
14.	Personal Management	--

Course Specifications: Natural Products and Green Chemistry

Course Title	Natural Products and Green Chemistry
Course Code	CYC653A
Course Type	Core Theory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this module is to provide details on a number of reactions that are used in modern organic synthesis with emphasis on their applications for drug discovery and natural product synthesis.

Module focuses on green chemistry principles and their applications in industrial processes. Students will also be able to improvements and modifications that are being made in both research and manufacturing to maintain and even enhance environmental quality in the context of social impact and public health.

2. Course Size and Credits:

Number of Credits	03
Credit Structure (Lecture: Tutorial: Practical)	3:0:0
Total Hours of Interaction	45
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- **CO-1.** Discuss the sources, physical, chemical properties and synthesis of alkaloids, steroids, and plant pigments, pyrethroids using nucleophilic, electrophilic, radical chemistry, elementary organometallic reactions and principles of green synthesis
- **CO-2.** Identify the new synthetic methods for the synthesis of various natural products using green chemistry principles
- **CO-3.** Evaluate the greener approach for the synthesis of industrially important chemicals such as alkaloids, steroids, plant pigments, pyrethroids
- **CO-4.** Apply heterocyclic synthesis, green synthesis, named reaction, pericyclic, photochemistry to synthesize various natural products
- **CO-5.** Recommend suitable reagents for maximizing the yield, minimizing the synthetic steps and to introduce stereoselectivity in natural products and synthetic molecules

Dean – Academic Affairs
Ramaiah University of Applied Sciences
Bangalore

4. Course Contents

Terpenoids and Carotenoids: Nomenclature, Classification, Source, isolation, general methods of structure determination, isoprene rule, structure determination, stereochemistry, biosynthesis and synthesis of the following representative molecules B-Carotene a-Terpeneol, Total synthesis of citral, Geraniol, Menthol, Farnesol, Zingiberene, Santonin, Camphor, Farnesol, Zingiberene

Alkaloids: Definition, nomenclature and physiological action, occurrence, isolation, general methods of strucutre elucidation, degradation, classification based on nitrogen heterocyclic ring, role of alkaloids in plants, Structure, stereochemistry, synthesis and total synthesis of the following : Atropine, ajmaline, Ephedrine, (+)- coniine, Nicotine, Quinine, Morphine, reserpine. Introduction to Vinca alkaloid.

Steroids: Occurrence, nomenclature, basic skeleton, Diel's hydrocarbon and stereochemistry. Isolation, structure determination and synthesis of Cholesterol and Testosterone, Androsterone, Estrone, Progestrone, Aldosterone, estradiol.

Plant Pigments: Occurrence, nomenclature and general methods of structure determination. Isolation and synthesis of Luteolin, Quercetin, Quercetin-3-glucoside, Vitexin, Diadzein, Butein, Aureusin, Cyanidin-7-arabinoside, Cyanidin (any two)

Porphyrins: Structure and synthesis of Haemoglobin and Chlorophyll

Prostaglandins: Occurrence, nomenclature, classification, biogenesis and physiological effects, synthesis of PGE2, PGE2α and other derivatives.

Agrochemicals: Natural and synthetic Pyrethroids, Rotenones and pheromones (For structure elucidation, emphasis is to be placed on the use of spectral parameters and retrosynthetic analysis wherever possible)

Introduction to green chemistry: Principles of green chemistry and designing a chemical synthesis: twelve principles - explanation and examples; application of these principles in designing a green synthesis.

Green solvents, solventless processes, immobilized solvents and ionic liquids; Alternative reaction media: supercritical fluids as solvents, example-super critical CO2, solvent less reactions, ionic liquids.

Energy requirements for reactions - Use of microwaves, ultrasonic energy and reactions assisted through microwave and ultrasound.

Environmental impact of chemical processes and products: emission avoidance, waste treatment, waste disposal options, salt recovery.

Regulated chemicals - ozone, dioxins, organochlorine pesticide residues, carbon monoxide and plastics.

Multicomponent reactions: Strecker Synthesis, Ugi 4CC, Biginelli synthesis, Hantzsch synthesis, Pictet-Spengler synthesis.

Click Reactions: Characteristics; Huisgen 1,3-Dipolar Cycloaddition.

Catalysis in green chemistry: solid acid catalysis, solid base catalysis, catalyticoxidations and reductions, catalytic c-c bond formation, biocatalysis/solvolysis.

Future trends in green chemistry: oxidation reagents and catalysts; biomimetic, multifunctional reagents; combinatorial green chemistry; proliferation of solventless reactions; non-covalent derivatization; green chemistry in sustainable development.

Course Specifications: Advanced Heterocyclic Chemistry and Pharmaceutical Products Synthesis

Course Title	Advanced Heterocyclic Chemistry and Pharmaceutical Products Synthesis
Course Code	CYC654A
Course Type	Core Theory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this Course is to introduce students to advanced heterocyclic and pharmaceutical chemistry. Students are taught the concepts of Synthesis of Heterocyclic compounds with one and more than one heteroatom, pharmaceutical products using named reaction and combinatorial chemistry. Course also focuses on advanced nuclear magnetic spectroscopy techniques to identify the pharmaceutical compounds.
Emphasis is given on organic reaction mechanisms and uses of protection and deprotection in synthesis of organic molecules.

2. Course Size and Credits:

Number of Credits	03
Credit Structure (Lecture: Tutorial: Practical)	3:0:0
Total Hours of Interaction	45
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	100
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-2. Discuss the use of organic reagents, protection and deprotection of various functional groups, functional group interconversion in organic synthesis and principles of 2D NMR techniques
CO-2. Illustrate the combinatorial, heterocyclic, green and photochemical synthesis to synthesize monomers used in various industrial applications
CO-3. Identify the reagents, synthons, reaction conditions for the synthesis of organic molecules and correlation spectroscopic techniques to assess the coupling pattern within the molecule
CO-4. Apply the combinatorial, C-C, C-N, C-O etc., bond forming reactions in the synthesis of various heterocyclic molecules
CO-5. Recommend the stereochemical feature, named reactions, pericyclic, photochemical reactions, for synthesis and spectroscopic techniques to identify the sythesised natural product or pharmaceutical molecules by the combinatorial, C-C, C-N, C-O etc., bond forming reactions in the synthesis of various heterocyclic molecules

4. Course Contents

Natural Products -II
Terpenoids, Carotenoids and Alkaloids

Advanced Heterocyclic Chemistry:
Heterocycles with more than two hetero atoms: Synthesis, reactivity, aromatic character and importance of the following heterocycles: Triazoles, Oxadiazoles, Thiadiazoles, Triazines. Larger ring and other heterocycles: Synthesis and reactivity of Azepines, Oxepines and Thiepines. Synthesis and rearrangement of Diazepines. Synthesis of Benzoazepines, Benzodiazepines, Benzooxepines, Benzothiepines, Azocines, and Azonines. HC-6: Banzanellated azoles and dipolar structures Banzanellated azoles: Synthesis and reactivity of Benzimidazoles, Benzoxazoles and Benzothiazoles. Heterocyles with Ring-Junction nitrogen: Synthesis and reactivity of Quinolizines, Indolizines and Imidazopyridines. Heterocycles with Dipolar structures: Betaines: Formation, aromaticity and reactivity of pyridine-N-oxides and pyridinium imides. Mesoionic heterocycles: Synthesis and aromaticity of sydnones and 1,3- dipolar addition reaction of mesoionic heterocycles.

Pharmaceutical Products Synthesis: C-C, C-N and C-O bond forming reactions used in the synthesis of drugs: Buchwaldcoupling, Suzuki coupling, Stille ,Negishi coupling, Grignard reaction, etc.
Stereochemical aspects in drugsynthesis: R and S stereoisomers, importance of chiral purity and racemization, applications of the above methodologies to synthesizethe drug molecules.
Combinatorial chemistry: Solid- phase peptide synthesis: Steps involved - attaching an amino acid and heterocyclic moieties to the resin,protection, coupling, deprotection,removal from the resin; peptide coupling reagents - DCC, EDCI, BOP, PyBOP, PyAOP, HOBt, HOAt,HBTU, HATU, etc.

Synthetic Drugs: Classification, and synthesis of the following classes of drugs included in I.P. and B.P. and U.S.P.), with emphasis on recently introduced drugs: General anesthetics: nitrous oxide, halothane , Antibiotics: Sulfa drugs, Antiviral drugs: Anti-HIV drugs, Psychoactive drugs: tranquilizers (Phenothiazine's, Tricyclic analogs), antianxiety drugs (Benzodiazepines), Anticonvulsants: GABA analogs, Anti-histamines: H1 and H2 receptor antagonists, Analgesics: Synthetic and semi- synthetic drugs, Anti-inflammatory: steroidal and non-steroidal drugs, Adrenergic and cholinergic drugs: cardiovascular and antihypertensive drugs (Calcium channel Blockers, ACE inhibitors), Antineoplastic drugs: Alkylating agents, synthesis and antimetabolites.

General Introduction to two-Dimensional NMR Spectroscopy:

Basic principles of two-dimensional (2D) NMR spectroscopy, 2D line shapes, Resolved 2D spectroscopy. Correlated 2D experiments, Homonuclear and Heteronuclear, COSY, TOCSY, NOESY, ROESY, DOSY, HETCOR, INADEQUATE.

Multinuclear 2D and 3D experiments such as HSQC, HMQC, HNCA and HNCA(CO).Application of UV, IR, NMR (1D and 2D)and Mass Spectroscopy in the structural elucidation of organic compounds.

Course Specifications: Research Methodology

Course Title	Research Methodology
Course Code	MPF615A
Course Type	Core Theory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of the course is to introduce students to the principles of research, research methodology and significant phases of research.
Students are taught the significant role of Literature Review in a research cycle and the expectations from good literature review as well as procedure for systematic literature review. The essential aspects of technical communication to develop desirable writing skills for the preparation of research document including research paper as well as the skills for an effective presentation are also discussed. The module also emphasizes the desirable close knit relation between innovation and concept of out of the box thinking. Students will get an insight into the privilege, honour and the associated responsibilities of a researcher.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	2:0:0
Total Hours of Interaction	30
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-1. Describe the value, scope, relevance and mandatory steps of research as well as principles of effective research
CO-2. Discuss and demonstrate the application and utility of the Systematic approach and out of box thinking concepts for research to be effective
CO-3. Explain and apply the procedures outlined for a systematic Literature Review
CO-4. Outline the principles to prepare a well-structured research proposal and research paper
CO-5. Identify and apply the essential skills desirable for an effective technical presentation

Dean – Academic Affairs

4. Course Contents

Foundations of Research:
Definitions of Research, Mandatory Steps in Research, Types of Research, Relevance of Research for Innovation and Technology Development, Effective Research and Self Discipline. Out of the Box Thinking and Systematic approach in Research – Transformation to Impossible Thinking, Convergent and Divergent Thinking, Generation, Evaluation and Selection of Ideas.

Literature Review:
Importance of Literature Review, Constituents of Good Literature Review, Strategies for Literature Search, Referencing, Paraphrasing, and Summarizing Academic Standards and Ethics. Statistical Methods and Data Analysis

Research Proposal:
Structure of a Good Research Proposal, Getting Started, Tips for Compilation of Good Research Proposal. Technical Communication - Research Paper for Publication- Significance of Problem Statement and its scope, Formulation of Hypothesis, Adequacy of Methodology, Significance of Presentation and Discussion of Results, Relevance and Importance of references.

Effective Presentation:
Preparation, Templates, Balance between Good Design and Good Content, Planning and Sequencing, PAMPERS (Projection, Articulation, Modulation, Punctuation, Enunciation, Repetition and Speed) rule, PEOPLE (Position & Gestures, Eye Contact, Orientation, Proximation, Looks & Appearance, and Expressions & Emotion) rule, 4P's Rule (Plan, Prepare, Practice and Present), Essentials of Effectiveness, Effective Pausing and Inclusive Answering.

7. Course Assessment and Reassessment

The details of the components and subcomponents of course assessment are presented in the Programme Specifications document pertaining to the M.Sc. (Analytical Chemistry) Programme. The procedure to determine the final course marks is also presented in the Programme Specifications document.

The evaluation questions are set to measure the attainment of the COs. In either component (CE or SEE) or subcomponent of CE (TSC1, TSC2), COs are assessed as illustrated in the following Table.

Dean – Academic Affairs
Ramaiah University of Applied Science
Bangalore

Focus of COs on each Component or Subcomponent of Evaluation			
	Component 1: CE (50% Weightage)		Component 2: SEE (50% Weightage)
Subcomponent ▶	TSC1	TSC2	
Subcomponent Type ▶	Term Test	Assignment	50 Marks
Maximum Marks ▶	25	25	
CO-1	X		X
CO-2	X		X
CO-3	X	X	X
CO-4	X		X
CO-5	X	X	X
The details of TSC1 and TSC2 are presented in the Programme Specifications Document.			

The Course Leader assigned to the course, in consultation with the Head of the Department, shall provide the focus of COs in each component of assessment in the above template at the beginning of the semester.

Course reassessment policies are presented in the Academic Regulations document.

8. Achieving COs

The following skills are directly or indirectly imparted to the students in the following teaching and learning methods:

S. No	Curriculum and Capabilities Skills	How imparted during the course
1.	Knowledge	Classroom lectures
2.	Understanding	Classroom lectures, Self-study
3.	Critical Skills	Assignment
4.	Analytical Skills	Assignment
5.	Problem Solving Skills	Assignment, Examination
6.	Practical Skills	Assignment
7.	Group Work	Group discussions, assignment
8.	Self-Learning	Self-study
9.	Written Communication Skills	Assignment, Examination
10.	Verbal Communication Skills	--
11.	Presentation Skills	--
12.	Behavioral Skills	--
13.	Information Management	Assignment
14.	Personal Management	--
15.	Leadership Skills	--

9. Course Resources

a. Essential Reading

1. Class Notes
2. Booth, W. C, Colomb and G.G Williams., (2005) The Craft of Research, Chicago University Press, USA
3. Willium M.K and Trochim. (2003)Research Methods, 2nd Edition, Biztantra Publicshres, New Delhi

Course Specifications: Advanced Organic Chemistry Laboratory I

Course Title	**Advanced Organic Chemistry Laboratory I**
Course Code	CYL656A
Course Type	Core Laboratory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

Aim of this course is to equip students to synthesize and characterize organic compounds.

This course intends to train the students to calculate limiting reagent, theoretical yield, and percent yield, engage in safe laboratory practices by handling laboratory glassware, equipment, and chemical reagents appropriately, work effectively as a member of a team. Communicate productively with lab mates, teaching assistant and instructor, maintain a detailed scientific notebook.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	0:0:2
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-1. Setup the experimental apparatus required to achieve the stated aim
CO-2. Conduct experiments as per the standard procedures and tabulate the measured values
CO-3. Calculate the limiting reagent, theoretical yield, and percent yield
CO-4. Evaluate data collected to determine the identity, purity, and percent yield of products and to summarize findings in writing in a clear and concise manner
CO-5. Maintain a detailed scientific notebook

Dean – Academic Affairs
Ramaiah University of Applied Sciences
Bangalore

4. Course Contents

List of Experiments:

1. Synthesis of benzopinacole
2. Diazotization of aniline
3. Acetophenone → Phenacyl bromide → Epoxide
4. Preparation of chalcone using benzaldyde
5. Photo dimerization of Anthracene
6. Photo polymerization of Acrylamide
7. Synthesis of 5,5-diphenyl hydantoin
8. Synthesis of pthalamide
9. Synthesis of 1,4-Dihydroquinoxaline-2,3- diene
10. Synthesis of chalcone
11. Synthesis of fluoresceine
12. Synthesis of Benzimadazole
13. Synthesis of 4-benzilidine- 3-methyloxazole-5-one
14. Extraction of menthol from mint leaves
15. Extraction of Eugenol from cloves
16. Extraction of Amphisin, reserveratrol E- vini, fennin from grapes stem
17. Spectral problems: Combined Spectral problem UV, FTIR, 1H,13C and Mass spectrum (Minimum 6 problems)

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO-1				3								3	
CO-2				3								3	
CO-3				3								3	
CO-4				3								3	
CO-5									3				3
3: Very Strong Contribution, 2: Strong Contribution, 1: Moderate Contribution

Course Specifications: Advanced Organic Chemistry Laboratory 2

Course Title	**Advanced Organic Chemistry Laboratory 2**
Course Code	CYL657A
Course Type	Core Laboratory
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

Aim of this course is to equip students to synthesize and characterize organic compounds.
This course intends to train the students to calculate limiting reagent, theoretical yield, and percent yield, engage in safe and green laboratory practices by handling laboratory glassware, equipment, and chemical reagents appropriately, work effectively as a member of a team. Communicate productively with lab mates, teaching assistant and instructor, maintain a detailed scientific notebook, perform common laboratory techniques including reflux, distillation, recrystallization, vacuum filtration, and thin-layer chromatography, carry out work up and separation procedures.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	0:0:2
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-1. Setup the experimental apparatus required to achieve the stated aim
CO-2. Conduct experiments as per the standard procedures and tabulate the measured values
CO-3. Calculate the limiting reagent, theoretical yield, and percent yield
CO-4. Evaluate data collected to determine the identity, purity, and percent yield of products and to summarize findings in writing in a clear and concise manner
CO-5. Maintain a detailed scientific notebook

Dean – Academic Affairs
Reva University of Applied Sciences
Bangalore

4. Course Contents

List of Experiments:

Estimations (any four)

1. Estimation of percentage purity of aspirin from commercial tablets
2. Estimation of percentage purity of paracetamol from commercial tablets
3. Determination of the Free Salicylic Acid concentration in Aspirin by Forming Fe+3 Complexes Aromatic Hydrocarbons and Aryl Halides
4. Determine the percentage purity of given sample of Isonicotic acid hydrazide tablet, an anti-tubercular drug.
5. Determine the percentage purity of given sample of Metronidazole tablet.
6. Determine the percentage purity of Dapsone in tablet.
7. Determine the percentage purity of given sample of Chlorpheniramine malate , an anti-histamine H1 receptor antagonist.
8. Determine the percentage purity of given sample of Benzyl penicillin tablet, an antibiotic

Natural Product Extractions: (any two)

1. Caffeine from tea leaves (Soxhlet extraction)
2. Piperine from pepper (UAE extraction)
3. Eucalyptus oil from leaves (Steam distillation)
4. Lycopene from tomatoes (Ionic solvent extraction) 6. Cinnamaldehyde from cinnamom (Deep eutectic solvent)
7. Eugenol from clove (microwave method)

Synthesis of pharmaceutical drugs: (any six)

1. Aldol condensation(solventfree reaction)
2. Synthesis of 3-(S)-hydroxy-3-
3. Synthesis of Hydantoin
4. Synthesis of Bezoxazole from 2 amino Phenol
5. Synthesis of Pyrrole and furan from Dicarbonyl
6. Synthesis of Indole from fisher indole synthesis
7. Synthesis of Aspirin by aqueous method
8. Synthesis of Chlorbutanol
9. As local anesthesia: Synthesis of hexamine as urinary anti- infective agent
10. Synthesis of 1, 2, 3, 4- tetrahydro carbazole
11. Synthesis of 2, 3-diphenyl quinoxaline
12. Synthesis of bis-β- napthol.
13. Synthesis of anthranilic acid
14. Synthesis of 1, 4-dihydropyridine
15. Spectral Problems: solving the 2DNMR spectral data. HETCOR, COSY, INADEQUATE, HMQC,etc. (Minimum 6 spectra)

Dean – Academic Affairs

Course Specifications: Seminar 3

Course Title	Seminar 3
Course Code	CYS658A
Course Type	Laboratory Course
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to train students to conduct independent study a topic of relevance and deliver a seminar.

The student is expected choose a topic of relevance and conduct independent study. The student is also expected to submit a report and present the same.

2. Course Size and Credits:

Number of Credits	02
Credit Structure (Lecture: Tutorial: Practical)	0:0:2
Total Hours of Interaction	60
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-1. Conduct a thorough literature review and submit a review article / scientific report
CO-2. Make a presentation to a panel of examiners

4. Course Contents

Choose the relevant research topic

Study literature and give seminar

Prepare a review article/ scientific report and give a presentation on the same topic

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)

1. Case Study Presentation	120	
2. Guest Lecture	00	
3. Industry / Field Visit	00	
4. Brain Storming Sessions	00	
5. Group Discussions	00	
6. Discussing Possible Innovations	00	
Term Tests, Laboratory Examination/Written Examination, Presentations		08
Total Duration in Hours		**128**

7. Course Assessment and Reassessment

The details of the components and subcomponents of course assessment are presented in the Programme Specifications document pertaining to the M. Sc. (Industrial Chemistry) Programme. The procedure to determine the final course marks is also presented in the Programme Specifications document.

The evaluation questions are set to measure the attainment of the COs. In either component (CE or SEE) or subcomponent of CE (LSC1), COs are assessed as illustrated in the following Table.

Focus of COs on each Component or Subcomponent of Evaluation		
	Component 1: CE (50% Weightage)	Component 2: SEE (50% Weightage)
Subcomponent ▶	LSC1	
Subcomponent Type ▶	Report	Presentation
Maximum Marks ▶	50 Marks	50 Marks
CO-1	X	
CO-2		X
The details of LSC1 are presented in the Programme Specifications Document.		

The Course Leader assigned to the course, in consultation with the Head of the Department, shall provide the focus of COs in each component of assessment in the above template at the beginning of the semester.

Course reassessment policies are presented in the Academic Regulations document.

8. Achieving COs

The following skills are directly or indirectly imparted to the students in the following teaching and learning methods:

S. No	Curriculum and Capabilities Skills	How imparted during the course
1.	Knowledge	Literature reading
2.	Understanding	Literature reading
3.	Critical Skills	Literature reading
4.	Analytical Skills	Literature reading
5.	Problem Solving Skills	Drawing conclusions from the literature
6.	Practical Skills	Literature reading, preparation of report
7.	Group Work	
8.	Self-Learning	Literature reading, preparation of report
9.	Written Communication Skills	Preparation of report
10.	Verbal Communication Skills	Presentation of report
11.	Presentation Skills	Presentation of report
12.	Behavioral Skills	Course work
13.	Information Management	Presentation of report
14.	Personal Management	Course work
15.	Leadership Skills	---

Bangalore

Course Specifications: Seminar

Course Title	Seminar
Course Code	CYS661A
Course Type	Laboratory Course
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this course is to train students to conduct independent study a topic of relevance and deliver a seminar.

The student is expected choose a topic of relevance and conduct independent study. The student is also expected to submit a report and give a presentation on the chosen topic.

2. Course Size and Credits:

Number of Credits	04
Credit Structure (Lecture: Tutorial: Practical)	0:0:4
Total Hours of Interaction	120
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	50
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

CO-1. Conduct a thorough literature review and submit a review article
CO-2. Make a presentation to a panel of examiners

4. Course Contents

Choose the relevant research topic

Study literature give seminars

Prepare a review article and present the same

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO-1		2										3	
CO-2		2							3				3
3: Very Strong Contribution, 2: Strong Contribution, 1: Moderate Contribution

Course Specifications: Dissertation

Course Title	Dissertation
Course Code	CYP662A
Course Type	Laboratory Course
Department	Chemistry
Faculty	Mathematical and Physical Sciences

1. Course Summary

The aim of this module is to train a student to carry out research work.

The research work will be carried out at MSRUAS or in any other laboratory of student's choice under the supervision of a senior researcher. The duration of the research work is for six months. The student is expected to submit a dissertation and make a presentation to the examiners in the faculty.

2. Course Size and Credits:

Number of Credits	15
Credit Structure (Lecture: Tutorial: Practical)	0:0:15
Total Hours of Interaction	450
Number of Weeks in a Semester	15
Department Responsible	Chemistry
Total Course Marks	300
Pass Criterion	As per the Academic Regulations
Attendance Requirement	As per the Academic Regulations

3. Course Outcomes (COs)

After the successful completion of this course, the student will be able to:

- **CO-1.** Recognize the need for developing a new or improving an existing scientific problem through an organized survey of literature
- **CO-2.** Define scientific problem
- **CO-3.** Design and perform the experiments
- **CO-4.** Analyse the results obtained
- **CO-5.** Write a technical Report and give presentation

4. Course Contents

Selection of topic for research
Critical review on the chosen topic
Performance of experiments
Collection of relevant data
Interpretation of data
Preparation of dissertation report and presentation of the same

Dean – Academic Affairs
Ramaiah University of Applied Sciences
Bangalore

5. Course Map (CO-PO-PSO Map)

	Programme Outcomes (POs)										Programme Specific Outcomes (PSOs)		
	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10	PSO-1	PSO-2	PSO-3
CO-1	3		3		3						3		
CO-2			3		3			3				3	3
CO-3			3	3	3			3				3	3
CO-4					3			3				3	3
CO-5						3			3	2			3
3: Very Strong Contribution, 2: Strong Contribution, 1: Moderate Contribution													

6. Course Teaching and Learning Methods

Teaching and Learning Methods	Duration in hours	Total Duration in Hours
Face to Face Lectures		00
Demonstrations		00
1.Demonstration using Videos	00	
2. Demonstration using Physical Models / Systems	00	
3. Demonstration on a Computer	00

Others		450
1. Case Study Presentation / Solving Research Problem	450	
2. Guest Lecture	00	
3. Industry / Field Visit	00	
4. Brain Storming Sessions	00	
5. Group Discussions	00	
6. Discussing Possible Innovations	00	
Term Tests, Laboratory Examination/Written Examination, Presentations		10
Total Duration in Hours		**460**

7. Course Assessment and Reassessment

The details of the components and subcomponents of course assessment are presented in the Programme Specifications document pertaining to the M. Sc. (Industrial Chemistry) Programme. The procedure to determine the final course marks is also presented in the Programme Specifications document.

The evaluation questions are set to measure the attainment of the COs. In either component (CE or SEE) or subcomponent of CE (LSC1), COs are assessed as illustrated in the following Table.

Focus of COs on each Component or Subcomponent of Evaluation		
	Component 1: CE (33% Weightage)	**Component 2: (67% Weightage)**
Subcomponent ▶	**LSC1**	
Subcomponent Type ▶	**Pre-project (40 marks) and Mid Term (60 Marks) Presentation**	**Final Project Presentation (50 Marks), Report (100 Marks) Journal Article (50 Marks)**
Maximum Marks ▶	**100**	**200**
CO-1	X	X
CO-2	X	X
CO-3	X	X
CO-4	X	X
CO-5		X
The details of LSC1 are presented in the Programme Specifications Document.		

The Course Leader assigned to the course, in consultation with the Head of the Department, shall provide the focus of COs in each component of assessment in the above template at the beginning of the semester.

Course reassessment policies are presented in the Academic Regulations document.

8. Achieving COs

The following skills are directly or indirectly imparted to the students in the following teaching and learning methods:

S. No	Curriculum and Capabilities Skills	How imparted during the course
1.	Knowledge	Literature reading
2.	Understanding	Literature reading
3.	Critical Skills	Literature reading
4.	Analytical Skills	Literature reading
5.	Problem Solving Skills	Drawing conclusions from the literature
6.	Practical Skills	Literature reading, preparation of report
7.	Group Work	
8.	Self-Learning	Literature reading, preparation of report
9.	Written Communication Skills	Preparation of report
10.	Verbal Communication Skills	Presentation of report
11.	Presentation Skills	Presentation of report
12.	Behavioral Skills	Course work
13.	Information Management	Presentation of report
14.	Personal Management	Course work
15.	Leadership Skills	---
